Precautions

■ Mounting

Use M2.3 screws in combination with plane washers or spring washers to securely mount the switch. Tighten the screws at a torque of 2 to 3 kg-cm.

Because the switch uses polycarbonate resin as material for its component parts, contact OMRON if the switch material is likely to deteriorate due to adherence of oil or chemicals to the switch housing.

■ Soldering

To solder the lead to the terminal, apply a soldering iron rated at 30 W max. (temperature of soldering iron: 280° C max. within three seconds).

Note that applying a soldering iron too long or using one that is rated at more than 30 W may degrade the switch characteristics.

■ Operation

Make sure that the operating body pushes the switch actuator with an adequate force when the switch is to be operated, and that it does not touch the actuator when the switch is released.

Install the pin plunger switch so that the operating force is applied in alignment with the stroke of the actuator.

Do not apply excessive force to the actuator; otherwise, the switch may be damaged.

■ Degree of Protection

The D2JW satisfies the following test condition specified by the IEC Publication 529 (Degree of Protection by Enclosure):

Degree of protection: IP67

Test method: See the figure below.

Leave the test piece in water for 30 minutes with the top of the test piece submerged 15 cm or more below the water level and the bottom of the test piece submerged 1 m or more below the water level.

This test is to check the ingress of water into the switch enclosure after submerging the switch in water for a given time. Note that even if this test condition is met, the switch cannot be used in water.
