Digital Counter/Tachometer
H7CC

New and improved design for easier use, programming, maintenance and user feedback The improved user interface is intuitive and offers better overall visibility. Replacement time notification function notifies the user of potential preventive maintenance

NEW

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Refer to *Safety Precautions* page 61.

Basic Features

- The white-color display offers better visual clarity and visibility, and the color universal design is used.
- Up/Down Keys are provided for all six digits, which reduces the number of button operations during setup and other processes.
- An easy operation is realized by the operation guide on which each key lights up.
- The progress can be easily understood at one glance from the status indicators of the present value and the measurement value.
- The body depth of all models with screw terminals has been reduced to 59 mm.

Safety and Reliability

- The replacement time is notified in advance by predicting the service life.
- The power supply circuit and input circuits are isolated in all models, and therefore, there is no need of any wiring restrictions.

Other Features

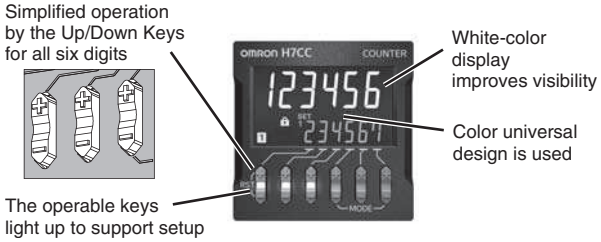
- Follows the ratings, characteristics, and functionality of the H7CX-N.
- Equipped with the Output Allocation and Output ON/OFF Inversion Function.
- Equipped with a Memory Backup and H7AN Compatibility Function to facilitate problem-free conversion from H7CN/H7AN.

Features

Basic Features

Better visual feedback and operation

The white-color display offers better visual clarity and visibility, and the color universal design is used. The keys of all six digits can be operated up/down for easier use. The LED indicator of the operable keys lights up to support setup.



Status Notification by Status Indicator

The status can be indicated by the ratio of the present value or measurement value to the set value, which makes it easy to understand the status.

Three indicators light up when the status reaches 50%

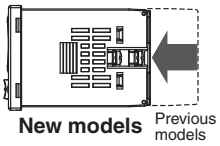
All indicators light up when the status reaches 100%

Shortened Body

The body depth of all models with screw terminals has been reduced to 59 mm, which contributes to thinner control panels!

Models with Screw Terminals: 59 mm

Models with Sockets: 63.7 mm (case dimension)

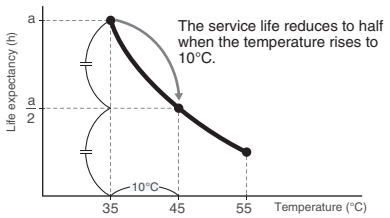


Safety and Reliability

Notification of Replacement Time

The service life prerequisites of the counter include the relay output count and the deterioration of the electrolytic capacitors. In the H7CC, in addition to the relay output count, an alarm is displayed when the deterioration of electrolytic capacitors due to the cumulative run time reaches the standard value, and planned maintenance is supported.

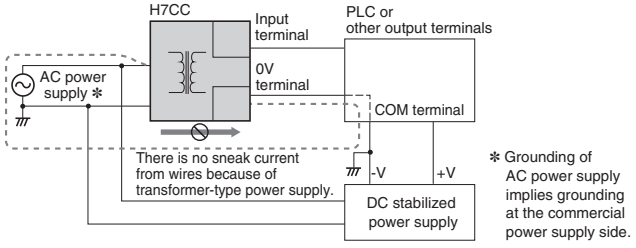
Note: For details, refer to *Replacement Time Notification Function* on pages 41 and 57.



Relationship between the life expectancy of electrolytic capacitors and temperature (Example)

Isolated Power Supply and Input Circuits

In all models, the power supply circuit and input circuits are isolated. Previous non-isolated counters had wiring restrictions and could be damaged if wired incorrectly. The H7CC removes these worries.



Other Features

Equipped with a Key Protect Function

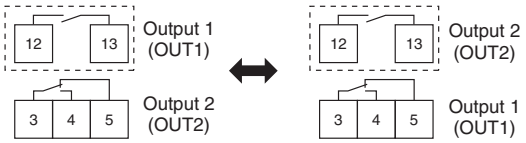
Any abnormality in the device due to malfunctioning or setting errors can be prevented.

Follows the Ratings, Characteristics, and Functionality of the H7CX-N

The H7CC follows the ratings, characteristics, and functionality of the H7CX-N. Other than the H7CC-A8□, all models are equipped with power supply to external devices, which reduces the load on wiring.

Output Allocation Function

The allocation of outputs 1 and 2 (OUT1 and OUT2) can be changed. In the conventional 2-stage output models, output 1 (OUT1) was fixed as SPST, and output 2 (OUT2) was fixed as SPDT, however, in the H7CC, the allocation of outputs 1 and 2 (OUT1 and OUT2) can be changed to SPST or SPDT, which reduces the man-hours involved when it is necessary to change the wiring.



Output ON/OFF Inversion Function

Conventionally, the output turns ON when the set value is reached, however, when this function is used, the output can be turned OFF when the set value is reached. As a result, the man-hours involved in checking the wiring can be reduced.

Memory Backup Function

Conversion from the H7CN/H7AN is supported by enabling the setting of the present value and the output state memory backup.

H7AN Compatibility Function

Conversion from the H7AN is supported by enabling the setting to start counting from 999999 when the present value being decremented exceeds 0.

Reset Operation

To prevent operational errors, reset by pressing and holding RST keys (+ and - on the left). Then, when the reset is enabled, you will be visually guided by blinking LEDs. Note: For details, refer to *Nomenclature* on pages 10 and 46.

H7CC-A□ Digital Counter

- Equipped with a replacement time notification function.
- The white-color display further improves visibility, and the color universal design is used. The Up/Down Keys make it easier to use the Counter.
- Compatible with the ratings, characteristics, and functionality of the H7CX-N.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Specifications

Ratings

Item		Model H7CC-A8/-A11□	H7CC-A□	H7CC-AW□/AU□
Classification		Preset counter		Preset counter/ tachometer
Configuration		1-stage preset counter, 1-stage preset counter with total counter (selectable) ✻1		1-stage/2-stage preset counter, total and preset counter ✻1, batch counter, dual counter, twin counter, and tachometer (selectable)
Ratings	Power supply voltage ✻2	• 100 to 240 VAC, 50/60 Hz • 24 VAC, 50/60 Hz or 12 to 48 VDC		
	Operating voltage fluctuation range	85% to 110% of rated supply voltage (12 to 48 VDC: 90% to 110%)		
	Power consumption	Approx. 6.8 VA at 100 to 240 VAC, Approx. 5.5 VA/3.3 W at 24 VAC/12 to 48 VDC,		
Mounting method		Flush mounting or surface mounting	Flush mounting	
External connections		8-pin/ 11-pin socket	Screw terminals	
Degree of protection		IEC IP66 for panel surface only and only when Y92S-P6 Waterproof Packing is used.		
Input signals		CP1, CP2, reset, and total reset ✻4		CP1, CP2, reset 1, and reset 2
Counter	Maximum counting speed	30 Hz (minimum pulse width: 16.7 ms) or 10 kHz (minimum pulse width: 0.05 ms) (selectable) (ON/OFF ratio 1:1) ✻Common setting for CP1 and CP2		
	Input mode	Increment (UP), decrement (DOWN), increment/decrement (UP/DOWN A (command input), UP/DOWN B (individual inputs), or UP/DOWN C (quadrature inputs)), UP/DOWN D (command input), UP/DOWN E (individual inputs), UP/DOWN E (quadrature inputs)		
	Output mode	N, F, C, R, K-1, P, Q, A, K-2, D, and L.		N, F, C, R, K-1, P, Q, A, K-2, D, L, and H.
	One-shot out put time	0.01 to 99.99 s		
	Reset system	External (minimum reset signal width: 1 ms or 20 ms, selectable), manual, and automatic reset (internal according to C, R, P, and Q mode operation)		
Tachometer		Refer to the separate table for *tachometer function ratings*.		
Prescaling function		Yes (0.001 to 99.999)		
Decimal point adjustment		Yes (right most 3 digits)		
Sensor waiting time		290 ms max. (Control output is turned OFF and no input is accepted during sensor waiting time.)		
Input method		No-voltage (NPN) input/voltage (PNP) input (switchable) No-voltage inputs: ON impedance: 1 kΩ max. (Leakage current: 12 mA at 0 Ω) ON residual voltage: 3 V max. OFF impedance: 100 kΩ min. Voltage input: High (logic) level: 4.5 to 30 VDC Low (logic) level: 0 to 2 VDC (Input resistance: approx. 4.7 kΩ)		
External power supply		12 VDC (±10%), 100 mA (except for H7CC-A8□ models) Refer to *Precautions for Correct Use* on page 61 for details.		
Control output		• Contact output: 3 A at 250 VAC/30 VDC, resistive load (cosϕ=1), Minimum applied load: 10 mA at 5 VDC (failure level: P, reference value) • Transistor output: NPN open collector, 100 mA at 30 VDC, Residual voltage: 1.5 VDC max. (approx. 1 V), Leakage current: 0.1 mA max.		
Display ✻3		7-segment, negative transmissive LCD Character height Count value: 10 mm (white) Set value: 6 mm (green)		
Digits		6 digits -99999 to 999999 (-5 digits to +6 digits)		6 digits -99999 to 999999 (-5 digits to +6 digits), tachometer: 0 to 999999
Memory backup		Non-volatile memory (overwrites: 100,000 times min.) that can store data for 10 years min.		
Operating temperature range		-10 to 55°C (-10 to 50°C if Counter/Tachometers are mounted side by side) (with no icing or condensation)		
Storage temperature range		-25 to 70°C (with no icing or condensation)		
Operating humidity range		25% to 85%		
Case color		Black (N1.5)		
Attachments		---	Flush mounting adapter, waterproof packing, terminal cover	

✻1. 1-stage preset counter and total counter functionality.
✻2. Do not use the output from an inverter as the power supply.The ripple must be 20% maximum for DC power.
✻3. The display is lit only when the power is ON. Nothing is displayed when power is OFF.
✻4. Only reset input is performed in the H7CC-A8□, and the total count is also reset simultaneously.

Tachometer Function Ratings

Model / Item	H7CC-A8□ H7CC-A11□ H7CC-A□	H7CC-AW□/AU□			
Input mode	No tachometer functionality	Selectable from 1 inputs, independent measurements for 2 inputs, differential input for 2 inputs, absolute ratio for 2 inputs, and error ratio for 2 inputs.			
Pulse measurement method		Periodic measurement		Pulse width measurement	
Maximum counting speed		30 Hz (minimum pulse width: 16.7 ms)	1-input mode: 10 kHz (minimum pulse width: 0.05 ms) Other modes: 5 kHz (minimum pulse width: 0.1 ms)	30 Hz (minimum pulse width: 16.7 ms)	1-input mode: 10 kHz (minimum pulse width: 0.05 ms) Other modes: 5 kHz (minimum pulse width: 0.1 ms)
Minimum input signal width		---	---	30 ms ✻	1-input mode: 0.2 ms Other modes: 0.4 ms*
Measuring ranges		0.001 to 30.00 Hz	1-input mode: 0.001 to 10 kHz, Other modes: 0.01 to 5 kHz	0.030 to 999999 s	1-input mode: 0.0002 to 999999 s Other modes: 0.0004 to 999999 s
Sampling period		200 ms min.	200 ms min. or continuous selectable (minimum interval of 10 ms)	Continuous (minimum interval of 10 ms)	
Measuring accuracy		±0.1% FS ±1 digit max. (at 23 ±5°C)			
Output mode		Input mode: Not 2-input independent measurement: HI-LO, AREA, HI-HI, LO-LO 2-input independent measurement: HI-HI, LO-LO			
Auto-zero time		0.1 to 999.9s			
Startup time		0.0 to 99.9s			
Averaging		Simple averaging/moving averaging selectable, Processing: OFF, 2, 4, 8, or 16 times			
Hold input		Minimum input signal width: 20 ms			

✻ An input OFF time of at least 20 ms is required.

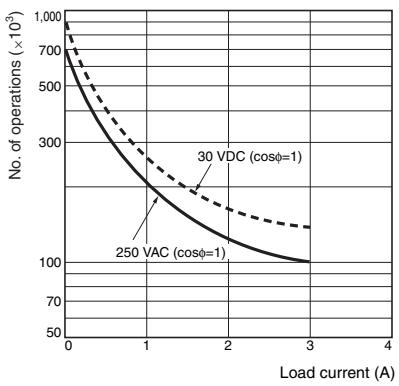
Characteristics

Insulation resistance		100 MΩ min. (at 500 VDC) between current-carrying terminals and exposed non-current-carrying metal parts, and between non-continuous contacts
Dielectric strength		2,000 VAC, 50/60 Hz for 1 min between current-carrying metal parts and non-current-carrying metal parts 2,000 VAC, 50/60 Hz for 1 min between power supply and input circuit for all models except H7CC-□D□ (1,500 VAC for 24 VAC/12 to 48 VDC) 1,500 VAC (for H7CC-□SD□), 50/60 Hz for 1 min between control output, power supply, and input circuit (2,000 VAC for models other than H7CC-□SD□) 1,000 VAC, 50/60 Hz for 1 min between non-continuous contacts
Impulse withstand voltage		6.0 kV between power terminals (1.0 kV for models with 24 VAC/12 to 48 VDC) 6.0 kV between current-carrying terminals and exposed non-current-carrying metal parts (1.5 kV for models with 24 VAC/12 to 48 VDC)
Static immunity		Malfunction: 8 kV Destruction: 15 kV
Vibration resistance	**Destruction**	10 to 55 Hz with 0.75-mm single amplitude each in three directions for 2 h each
	Malfunction	10 to 55 Hz with 0.35-mm single amplitude each in three directions for 10 min each
Shock resistance	**Destruction**	300 m/s^2 each in three directions
	Malfunction	100 m/s^2 each in three directions
Life expectancy		Mechanical: 10,000,000 operations min. Electrical: 100,000 operations min. (3 A at 250 VAC, resistive load, ambient temperature condition: 23°C) ✻
Weight		Approx. 120 g (Counter only)

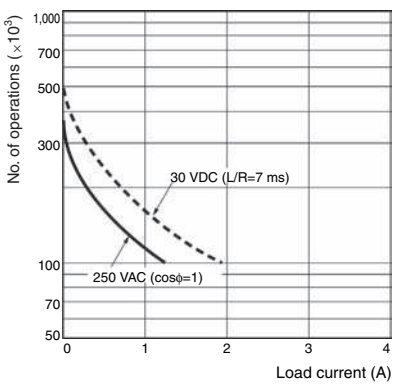
✻ Refer to the Life-test Curve.

Life-test Curve (Reference Values)

Resistive load



Inductive load



A current of 0.15 A max. can be switched at 125 VDC (cosϕ=1) and current of 0.1 A max. can be switched if L/R=7 ms. In both cases, a life of 100,000 operations can be expected.

✻1. The following safety standards apply to models with sockets (H7CC-A11□/H7CC-A8□).
cUL (Listing):
Applicable when an OMRON P2CF(-E) Socket is used.
cUR (Recognition):
Applicable when any other socket is used.
✻2. Industrial electromagnetic environment (EN/IEC 61326-1 Table 2)

I/O Functions

Using as a Counter✻1

Inputs	**CP1, CP2**	(1) In general (except for Dual Counter Mode) • Reads counting signals. • Increment, decrement, increment/decrement (command/individual/quadrature) inputs accepted. (2) When used as a dual counter or twin counter • Reads CP1 count signals with CP1 input and CP2 count signals with CP2 input. • Increment signals can be input.
	Reset/reset 1	(1) In general (except for Dual Counter Mode) • Resets present value and outputs (OUT2 when using the batch counter) ✻2. • Counting cannot be performed during reset/reset 1 input. • Reset indicator is lit while reset input is ON. (2) When used as a dual counter or twin counter. • Resets the CP1 present value (to 0). • Counting for CP1 input cannot be performed while the reset 1 input is ON. • The reset indicator is lit while the reset 1 input is ON.
	Total reset or reset 2	The reset function depends on the selected configuration ✻3.
Outputs	**OUT1, OUT2**	Outputs signals according to the specified output mode when a set value is reached.

✻1. For information on operation of I/O functions, refer to pages page 24 to page 29.
✻2. In increment mode or increment/decrement mode, the present value returns to 0; in decrement mode, the present value returns to the set value with 1-stage models, and returns to set value 2 with 2-stage models.
✻3. Reset operates as described in the following table. (The reset indicator will not be lit.)

Configuration	Reset operation
1-stage/2-stage preset counter	Does not operate (not used).
Total and preset counter	• Resets the total count value. • The total count value is held at 0 while the total reset input is ON.
Batch counter	• Resets the batch count value and batch output (OUT1). • The batch count value is held at 0 while the reset 2 input is ON.
Dual counter	• Resets the CP2 present value. • Counting for CP2 input cannot be performed while the reset 2 input is ON.
Twin counter	• Resets the CP2 present value.

• The following table shows the delay from when the reset signal is input until the output is turned OFF. (Reference values)

Minimum reset signal width	Output delay time	
	Relay output	Transistor output
1 ms	3.7 to 6.6 ms	0.58 to 0.78 ms
20 ms	17.0 to 19.8 ms	13.7 to 17.2 ms

Operating Procedures (Tachometer Function)

Inputs	**CP1, CP2**	Reads counting signals. (The CP2 input can be used when the input mode is not 1-input mode.)
	Reset 1/reset 2	• Holds the measurement value and outputs. (The reset 2 input can be used when the input mode is 2-input independent measurement.) • Functions as a hold input. The measurement value (displayed value) and the outputs are held while the RST Key on the front panel is pressed. • The hold indicator is lit when the value is being hold.
Outputs	**OUT1, OUT2**	Outputs signals according to the specified output mode when a set value is reached.

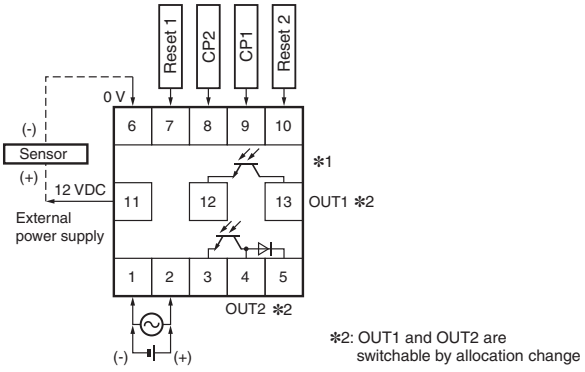
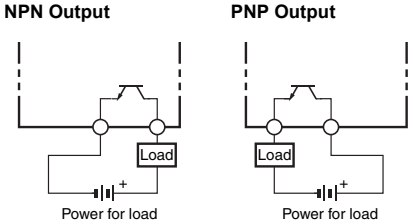
2-stage Transistor Output



Transistor Output

- The transistor output of the H7CC is isolated from the internal circuitry by a photocoupler, so the transistor output can be used as both NPN and PNP output.



- The diode connected to the collector of the output transistor is used to absorb inverted voltage that is generated when an inductive load is connected to the H7CC.

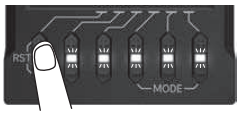
Operation Keys

10. Up Keys (UP1 to UP6)
(UP1, 2, 3, 4, 5, 6 from right to left)

11. Down Keys (DW1 to DW6)
(DW1, 2, 3, 4, 5, 6 from right to left)

12. Reset Operation (UP6+DW6) ✻

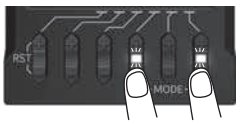
1. Press RST keys (UP6+DW6) simultaneously for at least one second.
2. LED on each key starts blinking.
   Do not release the keys until the LED starts blinking. Otherwise the setting value may change. If not blink, that is because the keys are not pressed simultaneously. In this case, release the keys after pressing for at least 1 second, and restart from 1.
3. Press and hold until the LED turns off.
   If you release the keys while blinking, the reset operation will be interrupted.



13. Mode Operation (UP1+UP3 or DW1+DW3)

<Change of setting item>
1. Press MODE keys (UP1+UP3 or DW1+DW3) simultaneously to switch setting items.

<Move to Function Setting Mode>
1. Press MODE key (UP1+UP3 or DW1+DW3) for at least 2 seconds simultaneously.
2. LEDs on UP1 (DW1) and UP3 (DW3) key start blinking.
   Do not release the keys until the LEDs start blinking. Otherwise the setting value may change. If not blink, that is because the keys are not pressed simultaneously. In this case, release the keys after pressing for at least one second, and restart from 1.
3. Press and hold until the LED turns off. If you release the keys during blinking, the mode will not be moved to Function Setting Mode.



DW1+DW3

14. Status indicator

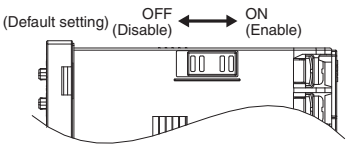
<When Run mode is not selected.>
· When the indicator display mode is ON
When used as a counter, the ratio of the present value to the set value is displayed from 0 to 100%.
When used as a tachometer, if "Upper and lower limit" or "Area" is selected in the tachometer output mode, the ratio of the measurement value to the comparison value is displayed from 0 to 100%.
· When the indicator display mode is all off or all lit
All off or all lit display.

Note. When you press the Up Key or the Down Key, the status indicator display goes off, and the pressed key lights up or blinks.

<When Function Setting Mode is not selected>
· The keys that can be set light up for notification.

Switches

15. Key-protect Switch



Note: The reset functions depends on the selected configuration.

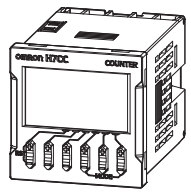
Configuration	Reset operation ✻
1-stage/2-stage preset counter	Resets the present value and outputs.
Total and preset counter	• Resets the present value and outputs. • When the total count value is displayed, resets the present value, the total count value, and outputs.
Batch counter	• Resets the present value and OUT2. • When the batch count value is displayed, resets the present value, the batch count value, and outputs.
Dual counter	Resets the CP1 present value, CP2 present value, dual count value, and outputs.
Twin counter	Resets the CP1 present value and output 1 when the CP1 present value is displayed. Resets the CP2 present value and output 2 when the CP2 present value is displayed.
Tachometer	Holds the measurement value and outputs (hold function). (When the input mode is 2-input independent measurement, the CP1 measurement value display will hold the CP1 measurement value and output 1 and the CP2 measurement value display will hold the CP2 measurement value and output 2.)

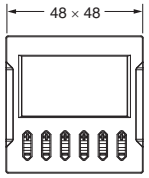
Dimensions

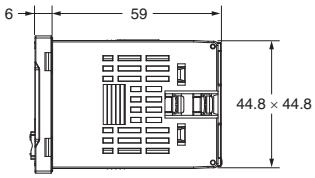
(Unit: mm)

Counters

H7CC-A/-AS/-AD/-ASD/-AW/-AWS/-AWD/-AWSD/-AU/-AUD (Flush Mounting Models)

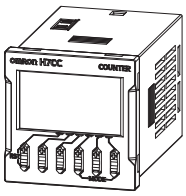


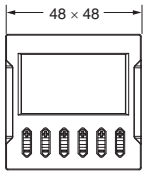


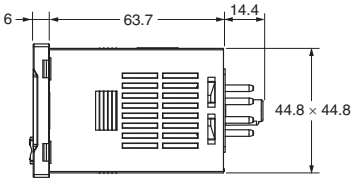


Note: M3.5 terminal screw (effective length: 6 mm)

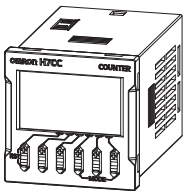
H7CC-A8/-A8D (Flush Mounting/Surface Mounting Models)

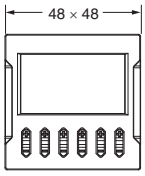


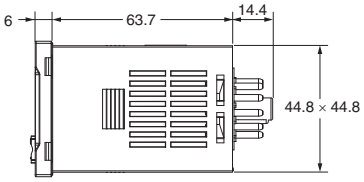




H7CC-A11/-A11S/-A11D/-A11SD (Flush Mounting/Surface Mounting Models)

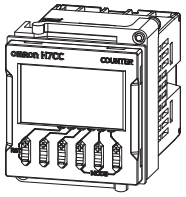


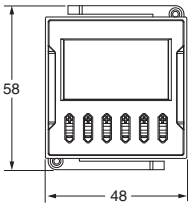


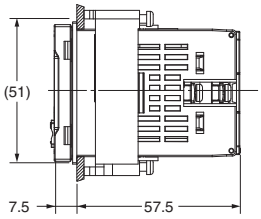


Dimensions with Flush Mounting Adapter

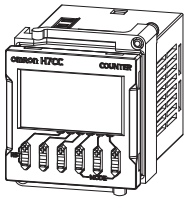
H7CC-A/-AS/-AD/-ASD/-AW/-AWS/-AWD/-AWSD/-AU/-AUD (Provided with Adapter and Waterproof packing)

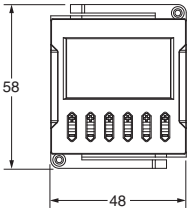


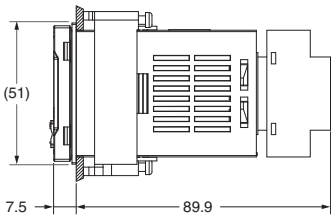




H7CC-A8/-A8D/-A11/-A11S/-A11D/-A11SD (Flush Mounting/Surface Mounting Models) (Adapter and Waterproof packing Ordered Separately)

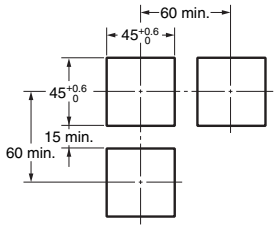




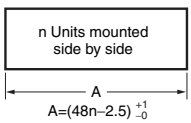


Panel Cutouts

Panel cutouts are as shown below. (according to DIN43700).

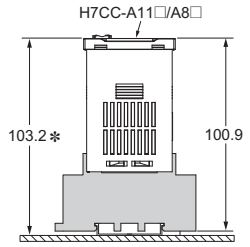


Note: **1.** The mounting panel thickness should be 1 to 5 mm.
2. To allow easier operation, it is recommended that Adapters be mounted so that the gap between sides with hooks is at least 15 mm (i.e., with the panel cutouts separated by at least 60 mm).
3. It is possible to horizontally mount Timers side by side. Attach the Flush Mounting Adapters so that the surfaces without hooks are on the sides of the Timers. If they are mounted side-by-side, water-resistance will be lost.



With Y92A-48F1 attached.
A={48n–2.5+(n–1)×4} $^{+1}_{-0}$
With Y92A-48 attached.
A=(51n–5.5) $^{+1}_{-0}$

Dimensions with Front Connecting Socket



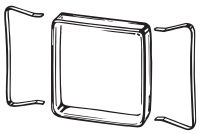
P2CF-08(-E)/P2CF-11(-E)
Front Connecting Socket (order separately)

✻ These dimensions depend on the kind of DIN track and Sockets. (Reference value.)

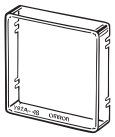
Accessories (Order Separately)

Note: Depending on the operating environment, the condition of resin products may deteriorate, and may shrink or become harder. Therefore, it is recommended that resin products are replaced regularly.

Soft Cover
Y92A-48F1



Hard Cover
Y92A-48



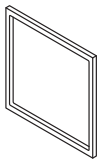
Protecting the Counter/Tachometer in Environments Subject to Oil

The H7CC's panel surface is water-resistive (conforming to IP□6) and so even if drops of water penetrate the gaps between the keys, there will be no adverse effect on internal circuits. If, however, there is a possibility of oil being present on the operator's hands, use the Soft Cover. The Soft Cover ensures protection equivalent to IP54F against oil. Do not, however, use the H7CC in locations where it would come in direct contact with oil.

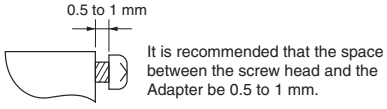
Waterproof Packing
Y92S-P6

Note: The Waterproof Packing is included with models with screw terminals.

Order the Waterproof Packing separately if it is lost or damaged. The Waterproof Packing can be used to achieve IP66 protection.



The panel surface of the H7CC-A/-R is water-resistant (conforming to IP66). To protect the internal circuits from water penetration through the space between the H7CC and operating panel, waterproof packing is included. Attach the Y92F-30 Adapter with sufficient pressure with the reinforcing screws so that water does not penetrate the panel.

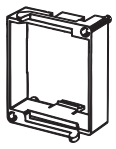


The Waterproof Packing will deteriorate, harden, and shrink depending on the application environment. To ensure maintaining the IP□6 waterproof level, periodically replace the Waterproof Packing. The periodic replacement time will depend on the application environment. You must confirm the proper replacement time. Use 1 year or less as a guideline. If the Waterproof Packing is not replaced periodically, the waterproof level will not be maintained. It is not necessary to mount the Waterproof Packing if waterproof construction is not required.

Flush Mounting Adapter
Y92F-30

Order the Flush Mounting Adapter with the following model number separately if it is lost or damaged.

Note: The Waterproof Packing is included with models with screw terminals.



Y92F-45

Note: 1. The adapter is black in color.
2. The Y92F-45 can be used in combination with the Y92F-30 Adapter provided with the Counter.

Operating Procedures

Setting Procedure Guide

Setting for Counter Operation *

Use the following settings.

Setting for Tachometer Operation *

Refer to page 31.

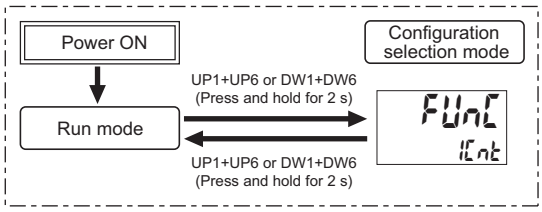
* At the time of delivery, the H7CC is set to the 1-stage preset counter configuration or 2-stage preset counter configuration. Refer to page 39 for information on switching models.

I/O Functions for Counter Operation

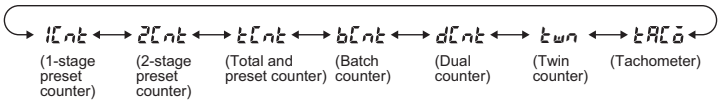
Step1 The H7CC-A□ is a Counter that contains more than one functional counter.
When using the Counter in any mode other than the default mode *, use the following chart to enter Configuration Selection Mode and set the functions that are suitable to the application.

* Table Default Modes and Selectable Functions

Model	Default mode	Selectable mode
H7CC-AW	2-stage preset counter	Any mode
H7CC-AU	1-stage preset counter	Any mode
Other models	1-stage preset counter	1-stage preset or total preset counter only



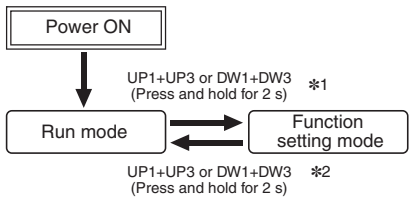
Select the function from Table using the UP1 Key (DW1 Key) .



Note: The modes that can be selected depend on the model. (Refer to the Table.)

Step2 Parameters are set with the operation keys on the front panel.

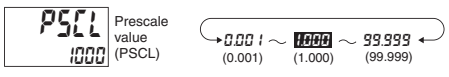
Change to Function Setting Mode.



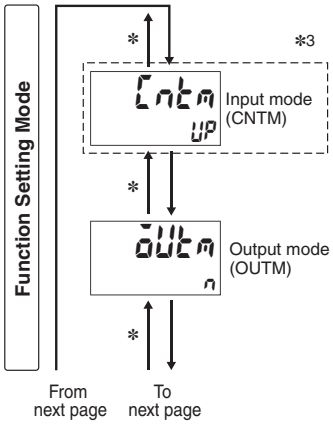
For details on operations and display in run mode, refer to page 21.
The display depends on the selected configuration.

*1 If the mode is switched to the function setting mode during operation, operation will continue.
*2 Changes made to settings in function setting mode are enabled for the first time when the mode is changed to run mode.
Also, when settings are changed, the counter is reset (present value initialized and output turned OFF) on returning to run mode.

The characters displayed in reverse video are the default settings.
In the function setting mode, the status indicator of the keys that can be set lights up.
(Example) In the case of the prescale value (PSCL)
A value from 0.001 to 99.999 can be set, and therefore, the status indicator of the UP1 Key to UP5 Key (DW1 Key to DW5 Key) lights up.



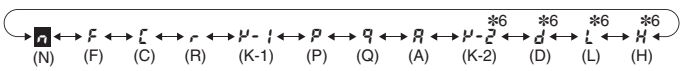
* Use UP1+UP3 to move up and DW1+DW3 to move down



• Set the input mode using the UP1 Key (DW1 Key).

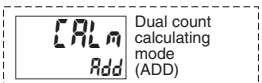
Note: Displayed only when Twin Counter Mode is not selected.
*5 Displayed for output modes other than K-2, D, L, and H only.

• Set the output mode using the UP1 Key (DW1 Key).



*6. K-2, d, L and H are displayed only when the H7AN compatibility function is oFF or the input mode is Ud-A, Ud-b, or Ud-C. (Not displayed when the function is set to tYn.)
H is displayed only for 2-stage models.

*3 When Using Dual Counter Operation



• Set the dual count calculating mode using the UP1 (DW1) Keys.

*4 Displayed only when the output mode is K-2, D, L, or H.

Usage as a Decrementing Counter (Sub)

The Sub parameter is normally not displayed. You must set the oUtA parameter shown below in advance to *6 (K-2, d, L, or H) to display it.

Function Setting Mode
✻ Use UP1+UP3 to move up and DW1+DW3 to move down
✻7
Output time (OTIM)
0.50
• Set each digit using the individual UP1 to UP4 Keys (DW1 to DW4 Keys).
0.01 ~ 0.50 ~ 99.99
(0.01 s) (0.50 s) (99.99 s)
Note: Displayed only when the output mode is C, R, K-1, P, Q, A, or K-2.
Counting speed (CNTS)
30Hz
• Set the counting speed using the UP1 Key (DW1 Key).
30Hz ↔ 5PHz
(30 Hz) (5 kHz) ✻
✻ The display shows 5 kHz, but the maximum counting speed is 10 kHz.
Reset input signal width (IFLT)
20mS
• Set the Reset input signal width using the UP1 Key (DW1 Key).
20mS ↔ 1mS
(20 ms) (1 ms)
Decimal point position (DP)
• Set the decimal point position using the UP1 Key (DW1 Key).
(No decimal point) (One digit after decimal point) (Two digits after decimal point) (Three digits after decimal point)
Note: Not displayed when the H7AN compatibility function is ON.
Prescale value (PSCL)
1.000
• Set each digit using the individual UP1 Key (DW1 Key).
0.001 ~ 1.000 ~ 99.999
(0.001) (1.000) (99.999)
Note: Not displayed when the H7AN compatibility function is ON.
NPN/PNP input mode (IMOD)
nPn
• Set the NPN/PNP input mode using the UP1 Key (DW1 Key).
nPn ↔ PnP
(NPN input) (PNP input)
Absolute value setting/forecast value setting (SETM)
Abs
• Make the absolute value setting and forecast setting using the UP1 Key (DW1 Key).
Abs ↔ oFSt
(ABS) (OFST)
Note: Displayed only when the configuration selection mode is set to the 2-stage counter 2Cnt.
Set value upper limit (SL-H)
999999
• Set each digit using the individual UP1 to UP6 Keys (DW1 to DW6 Keys).
1 ↔ 999999
(1) (999999)
Forecast setting upper limit (PL-H)
1
• Set each digit using the individual UP1 to UP6 Keys (DW1 to DW6 Keys).
1 ↔ 999999
(1) (999999)
Note: Displayed only when the configuration selection mode is set to the 2-stage counter 2Cnt and there is a forecast value setting.
Batch count upper limit (BL-H)
999999
• Set each digit using the individual UP1 to UP6 Keys (DW1 to DW6 Keys).
1 ↔ 999999
(1) (999999)
Note: Displayed only when the output mode is bCnt
✻7 Set each digit using the individual UP1 to UP4 Keys (DW1 to DW4 Keys).
When using as a 2-stage preset counter
One-shot output 2 time (OTM2)
0.50
0.01 ~ 0.50 ~ 99.99
(0.01 s) (0.50 s) (99.99 s)
Note: Displayed only when the output mode is C, R, K-1, P, Q, A, or K-2.
One-shot output 1 time (OTM1)
HoLd
HoLd/0.01 ~ 99.99
(Outputs held) (0.01 s) (99.99 s)
If the output time is 0.00, HoLd is displayed.
Note: Displayed for output modes other than D, L, and H. HOLD cannot be set when the output mode is K-2.
When using as a batch counter
One-shot output 2 time (OTM2)
0.50
0.01 ~ 0.50 ~ 99.99
(0.01 s) (0.50 s) (99.99 s)
Note: Displayed only when the output mode is C, R, K-1, P, Q, A, or K-2.
✻7 Set each digit using the individual UP1 to UP4 Keys (DW1 to DW4 Keys).
Twin Counter
Output 2 output time (OTM2)
0.50
0.01 ~ 0.50 ~ 99.99
(0.01 s) (0.50 s) (99.99 s)
Note: Displayed only when the output mode is C, R, K-1, P, Q, or A.
Output 1 output time (OTM1)
0.50
0.01 ~ 0.50 ~ 99.99
(0.01 s) (0.50 s) (99.99 s)
Note: Displayed only when the output mode is C, R, K-1, P, Q, or A.

Function Setting Mode
✻ Use UP1+UP3 to move up and DW1+DW3 to move down
Output allocation (OTST)
• Set the output allocation using the UP1 Key (DW1 Key).
oFF ↔ on
(OFF) (ON)
Note: Displayed only when the 2-stage preset counter, batch counter, or twin counter is selected in the H7CC-□W(U)□.
OFF: Output 1 (OUT1) = 12, 13 Output 2 (OUT2) = 3, 4, 5/
ON: Output 1 (OUT1) = 3, 4, 5 Output 2 (OUT2) = 12, 13 (The numbers are the terminals numbers.)
Key protect level (KYPT)
• Set the key protect level using the UP1 Key (DW1 Key).
KP-1 ↔ KP-2 ↔ KP-3 ↔ KP-4 ↔ KP-5 ↔ KP-6 ↔ KP-7
(KP-1) (KP-2) (KP-3) (KP-4) (KP-5) (KP-6) (KP-7)
✻8
Output inversion
✻8 Set the output inversion using the UP1 Key (DW1 Key).
Procedure for Models Other than "-□W(U)□" Models
Output inversion (OT-I)
n-o ↔ n-C
(Normally Open) (Normally Close)
Procedure for "-□W(U)□" Models
Output 1 (OUT1) inversion (OT1I)
n-o ↔ n-C
(Normally Open) (Normally Close)
Output 2 (OUT2) inversion (OT2I)
n-o ↔ n-C
(Normally Open) (Normally Close)
Memory back up (BKUP)
• Set the memory backup using the UP1 Key (DW1 Key).
on ↔ oFF
(Enable) (Disable)
H7AN compatibility function (H7AN)
• Set the H7AN compatibility function using the UP1 Key (DW1 Key).
oFF ↔ on
(OFF) (ON)
(When the function is set to ON, the count will shift from 0 to 999999.)
Note: Disable the H7AN compatibility function when converting from the H7CX or H7CX-N.
Indicator display mode (INDC)
• Set the indicator display mode using the UP1 Key (DW1 Key).
on ↔ RLoF ↔ RLLt
(Count status display) (Indicator display is turned OFF, and the status indicator is all off.) (Indicator display is turned OFF, and the status indicator is all lit.)
✻9
Output ON count alarm set value/ monitor value
✻9 Set each digit using the individual UP1 to UP4 Keys (DW1 to DW4 Keys).
Procedure for Models Other than "-□W(U)□" Models
Output ON count alarm set value (ON-A)
0 ~ 100 ~ 9999
(0 × 1000 times) (9999 × 1000 times)
Output ON count monitor value (ON-C)
Note: The monitor value is only displayed. It cannot be set.
Procedure for "-□W(U)□" Models
Output 1 (OUT1) ON count alarm set value (ON1A)
0 ~ 100 ~ 9999
(0 × 1000 times) (9999 × 1000 times)
Output 2 (OUT2) ON count alarm set value (ON2A)
0 ~ 100 ~ 9999
(0 × 1000 times) (9999 × 1000 times)
Output 1 (OUT1) ON count monitor value (ON1C)
Note: The monitor value is only displayed. It cannot be set.
Output 2 (OUT2) ON count monitor value (ON2C)
Note: The monitor value is only displayed. It cannot be set.
Cumulative run time (OT-A) alarm set value
• Set each digit using the individual UP1 to UP3 Keys (DW1 to DW3 Keys).
0.0 ~ 10.0 ~ 99.9
(0.0 year) (10.0 years) (99.9 years)
Cumulative run time (OT-C) monitor value
Note: The monitor value is only displayed. It cannot be set.
Software version (ver.)
Note: The monitor value is only displayed. It cannot be set.

Explanation of Functions
I/O Functions for Counter Operation

Input Mode (Cntm)
Set increment mode (UP), decrement mode (DOWN), or one of the increment/decrement modes (UP/DOWN A, UP/DOWN B, or UP/DOWN C, UP/DOWN D, UP/DOWN E, or UP/DOWN F) as the input mode.
(For details on the operation of the input modes, refer to *Input Modes and Present Value* on page 22.)

Dual Count Calculating Mode (CALm)
When using as a dual counter, select either ADD (addition) or SUB (subtraction) as the calculation method for the dual count value.
ADD: Dual count value = CP1 PV + CP2 PV
SUB: Dual count value = CP1 PV – CP2 PV

Output Mode (oUtm)
Set the way that control output for the present value is output. The possible settings are N, F, C, R, K-1, P, Q, A, K-2, D, L, and H.
The output modes that can be set vary with the model.
(For details on the operation of the output modes, refer to *Input/Output Mode Settings* on page 24.)

One-shot Output Time (otim)
Set the one-shot output time (0.01 to 99.99 s) for control output.
One-shot output can be used only when C, R, K-1, P, Q, A, or K-2 is selected as the output mode.

One-shot Output 2 Time (otm2)
Set the one-shot output time (0.01 to 99.99 s) for control output (OUT2).
One-shot output can be used only when C, R, K-1, P, Q, A, or K-2 is selected as the output mode.

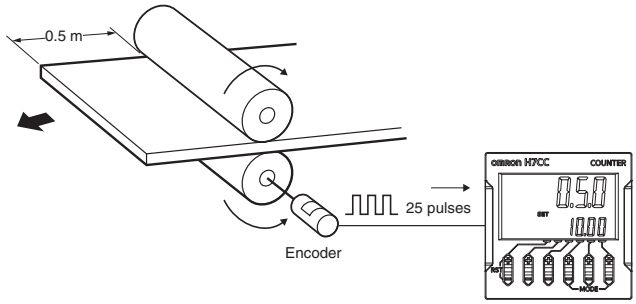
One-shot Output 1 Time (otm1)
Set the one-shot output time (0.01 to 99.99 s) for control output (OUT1).
One-shot output can be used only when the mode other than D, L, and H is selected as the output mode.
If the output time is set to 0.00, Hold is displayed, and outputs are held.

Counting Speed (Cnts)
Set the maximum counting speed (30 Hz/5 kHz) for CP1 and CP2 inputs together.
If contacts are used for input signals, set the counting speed to 30 Hz. Processing to eliminate chattering is performed for this setting.

Reset Input Signal Width (rFLt)
Set the reset input signal width (20 ms/1 ms) for reset/reset 1 and total reset/reset 2 inputs together.
If contacts are used for the input signal, set the input signal width to 20 ms. Processing to eliminate chattering is performed for this setting.

Decimal Point Position (dP)
Decide the decimal point position for the present value, CP1/CP2 present values, set value (SV1, SV2), total count value, and dual count set value.

Prescale Value (PSCL)
Pulses input to the counter are converted according to the specified prescale value.
(Setting range: 0.001 to 99.999)
Example: To display the feed distance for systems that output 25 pulses for a feed length of 0.5 m in the form □□.□□ m:
1. Set the decimal point position to 2 decimal places.
2. Set the prescale value to 0.02 (0.5 ÷ 25).



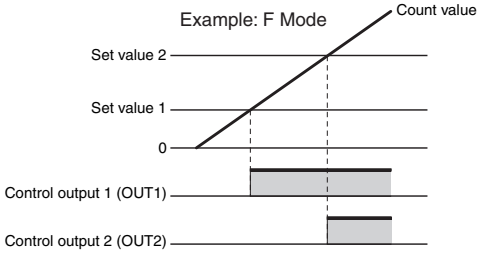
- Observe the following points when setting a prescale value.
  Set the set value to a value less than {Maximum countable value – Prescale value}.
  Example: If the prescale value is 1.25 and the counting range is 0.000 to 999.999, set the set value to a value less than 998.749 (= 999.999 – 1.25).
  If the set value is set to a value greater than this, output will not turn ON.
- Output will turn ON, however, if a present value overflow occurs (FFFFFF).

Note: If the prescale value setting is incorrect, a counting error will occur. Check that the settings are correct before using this function.

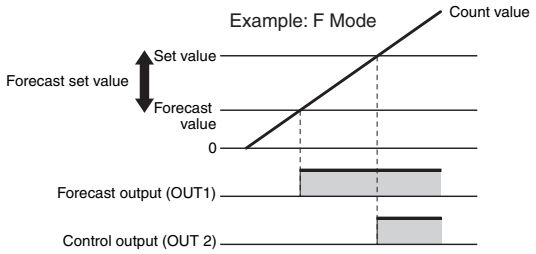
NPN/PNP Input Mode (imod)
Select either NPN input (no-voltage input) or PNP input (voltage input) as the input format. When using a two-wire sensor, select NPN input.
The same setting is used for all external inputs.
For details on input connections, refer to *Input Connections* on page 9.

Absolute Value Setting/Forecast Value Setting (SEtm)

For the 2 count output mode, an absolute value setting (Abs) or forecast value setting (dFSt) can be set for set value 1.
If the absolute value setting is used, specify an absolute value (deviation from 0).



If the forecast value setting is used, specify set value 1 as the forecast set value (deviation with respect to set value 2).
The forecast output (output 1) turns ON when the present value reaches the forecast value.
If the forecast set value is greater than or equal to the set value, the forecast output (output 1) will turn ON as soon as counting starts.



Set Value Upper Limit (SL-H)

Set the upper limit for the set value when it is set in run mode.
The setting can be made from 1 to 999999 for 6-digit models.

Forecast Set Upper Limit (PL-H)

Set the upper limit for the forecast set value.
The setting can be made from 1 to 999999 for 6-digit models.

Batch Count Upper Limit (bL-H)

Set the upper limit for the batch count value. The setting can be made from 1 to 999999 for 6-digit models.

Key Protect Level (KYPt)

Set the key protect level.
Refer to *Key Protect Level* on page 40.

Output ON Count Alarm Set Value (on-A, on1A, on2A)

The output ON count for notifying the replacement time can be set.
For details, refer to page 41.

Output ON Count Monitor Value (on-C)

The monitor value is only displayed. It cannot be set.
The output ON count will be 1,000 times the displayed value.

ON Count Monitor Values for Outputs 1 and 2 (OUT1 and OUT2) (on1C and on2C)

The monitor value for output 1 and 2 (OUT1 and OUT2) is only displayed. It cannot be set.
The output ON count will be 1,000 times the displayed value.

Output Allocation (Settings applicable to only H7CC-□W(U)□) (oESt)

Set the allocation of outputs 1 and 2 (OUT1 and OUT2). If output allocation is OFF, output 1 (OUT1) is allocated to terminals (12) and (13), and output 2 (OUT2) is allocated to terminals (3), (4), and (5). If output allocation is ON, output 1 (OUT1) is allocated to terminals (3), (4), and (5), and output 2 (OUT2) is allocated to terminals (12) and (13).

Output inversion (oEt-C, oEt1C, oEt2C)

Set logical inversion of output ON/OFF. In the case of two outputs, it is possible to individually set output inversion for each of output 1 and output 2 (OUT1 and OUT2). If output inversion is n-o (Normally Open), the output turns ON when the set value is reached. If output inversion is n-C (Normally close), the output turns OFF when the set value is reached.

Memory back up (bUPr)

Set the present value and the output state memory backup. If memory backup is available, the present value and output state are recovered to the state prior to power interruption. If memory backup is not available, the present value and output state are recovered to the reset state.

H7AN Compatibility Function (H7ANn)

When the present value being decremented exceeds 0, make the setting to start counting from 999999. When this function is ON, the value becomes 999999 after 0, and when this function is OFF, the count is in accordance with the output mode. The H7AN Compatibility Function is enabled only when 1-stage preset counter, 2-stage preset counter, and total and preset counter are selected, and is displayed in the function setting mode. It is not displayed when batch counter, dual counter, or twin counter are selected. This function enables the same operation when the H7AN is replaced with the H7CC.

Indicator Display Mode (indC)

Settings can be made to display the present value in status indicator. When this mode is ON, the status indicator changes in accordance with the ratio of the present value to the set value. In the case of ALOF, the indicator display is turned OFF, and the status indicator is all off. In the case of ALLT, the indicator display is turned OFF, and the status indicator is all lit.

(Example 1) When incrementing input is performed
The status indicators light up in an order starting from the left, when the status reaches 1/6, 2/6, 3/6 (50%), 4/6, 5/6, 6/6 (100%) in accordance with the ratio of the present value to the set value. Three indicators on the left light up when the status reaches 50%, and all indicators light up when the status reaches 100%. All indicators are lit even when the status is 100% or more. All indicators turn off when the value changes from 999999 to 0. If the counter continues thereafter, the status indicator will light up according to the present value.

(Example 2) When decrementing input is performed
The status indicators turn off in an order starting from the right, when the status reaches 6/6 (100%), 5/6, 4/6, 3/6 (50%), 2/6, 1/6 in accordance with the ratio of the present value to the set value. Three indicators on the right turn off when the status reaches 50%, and all indicators turn off when the status reaches 1/6. All indicators are off even when the status is below 1/6. All indicators light up when the H7AN compatibility function is ON and the value changes from 0 to 999999. If the counter continues thereafter, the status indicator will light up according to the present value.

Cumulative Run Time Alarm Set Value (ot-A)

The cumulative run time for notifying the replacement time can be set. For details, refer to page 41.

Cumulative Run Time Monitor (ot-C)

The cumulative run time is displayed. It is not a setting item. The numerical values are displayed in increments of 0.1 years.

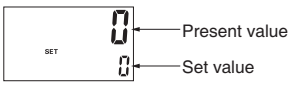
Operation in Run Mode

I/O Functions for Counter Operation

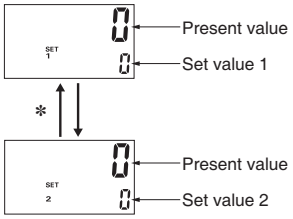
• Set values for each digit as required using the UP1 to UP6 Keys (DW1 to DW6 Keys).

0 ↔ 1 ↔ 2 ↔ 3 ↔ 4 ↔ 5 ↔ 6 ↔ 7 ↔ 8 ↔ 9

1-stage Preset Counter

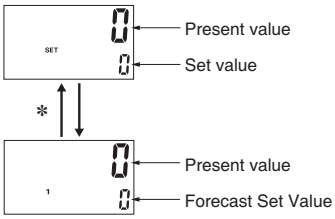


2-stage Preset Counter with Absolute Value Setting



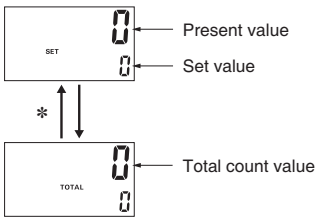
- **Present Value**
  Shows the present count value.
- **Set Values (Set Value 1 and Set Value 2)**
  Set the set values.
  When the present value reaches the set value (set value 1 or set value 2), a signal is output according to the specified output mode.

2-stage Preset Counter with Forecast Value Setting



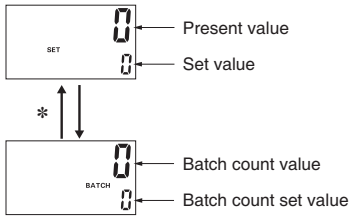
- **Present Value**
  Shows the present count value.
- **Set Values**
  Set the set values.
- **Forecast Set Value**
  Set the deviation for the set value.

Total and Preset Counter



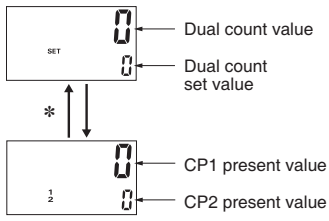
- **Present Value/Set Value**
  Same as 1-stage preset counter.
- **Total Count Value**
  Shows the present total count value.

Batch Counter



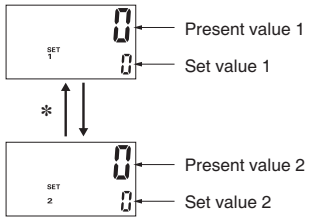
- **Present Value/Set Value**
  Same as 1-stage preset counter.
- **Batch Count Value**
  Shows the number of times the count has been completed for the present value.
- **Batch Count Set Value**
  Set the batch count set value.
  When the batch count value reaches the batch count set value, batch output (OUT1) turns ON.

Dual Counter



- **Dual Count Value**
  Shows the sum of the CP1 present value and CP2 present value when the dual count calculating mode is ADD and shows the value obtained by subtracting the CP2 present value from the CP1 present value when the dual count calculating mode is SUB.
- **Dual Count Set Value**
  Set the dual count set value.
  When the dual count value reaches the dual count set value, signals are output according to the specified output mode.
- **CP1/CP2 Present Value**
  Show the present count values for CP1 and CP2 present values respectively.

Twin Counter



- **Present Values 1 and 2**
  Shows the present count value 1 or 2.
- **Set Values 1 and 2**
  Setting for present value 1 or 2.

✻ Use UP1+UP3 to move up and DW1+DW3 to move down

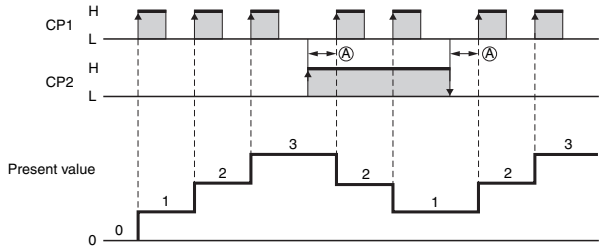
Input Modes and Present Value (See note 1.)

I/O Functions for Counter Operation

UP (Increment) Mode	DOWN (Decrement) Mode
CP1: Count input; CP2: Prohibit (gate) input  Ⓐ must be greater than the minimum signal width. (See note 2.)	CP1: Count input; CP2: Prohibit (gate) input  Ⓐ must be greater than the minimum signal width. (See note 2.)
CP1: Prohibit (gate) input; CP2: Count input  Ⓐ must be greater than the minimum signal width. (See note 2.)	CP1: Prohibit (gate) input; CP2: Count input  Ⓐ must be greater than the minimum signal width. (See note 2.)

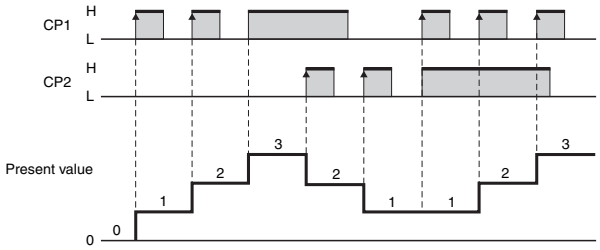
✻Counting starts when the CP1 is turned ON after turning ON the power.

UP/DOWN A Command Input Mode

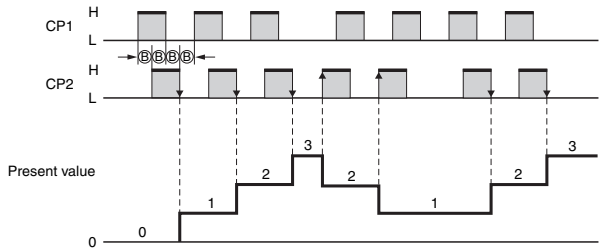


Ⓐ must be greater than the minimum signal width. (See note 2.)

UP/DOWN B Individual Input Mode

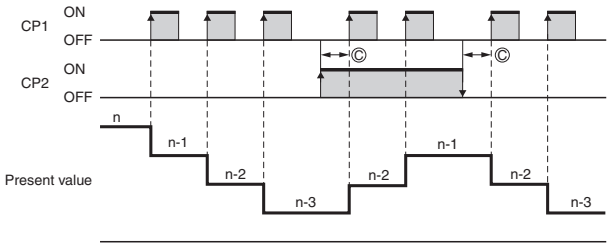


UP/DOWN C Quadrature Input Mode



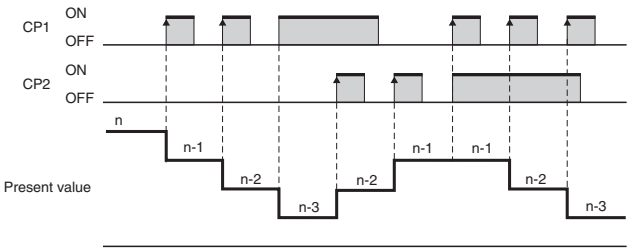
Ⓑ must be at least 1/2 the minimum signal width. (See note 2.)

UP/DOWN D Command Input Mode

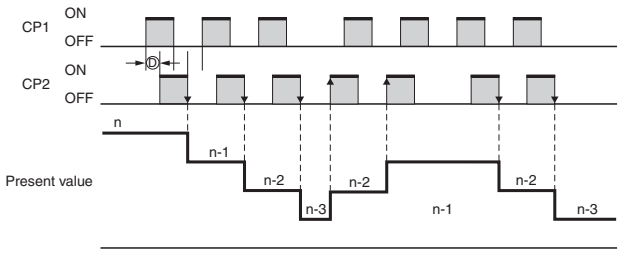


Ⓒ must be at least 1/2 the minimum signal width. (See note 2.)

UP/DOWN E Individual Input Mode



UP/DOWN F Quadrature Input Mode



Ⓓ must be at least 1/2 the minimum signal width. (See note 2.)

Note: 1. If the configuration selection is set to dual counter, CP1 and CP2 input will operate in the same way as the count input (CP1) of UP (increment) mode.

2. Ⓐ must be greater than the minimum signal width and Ⓑ must be at least 1/2 the minimum signal width. If they are less, a count error of ±1 may occur.

3. Minimum signal width: 16.7 ms (when maximum counting speed = 30 Hz)
100 µs (when maximum counting speed = 5 kHz)

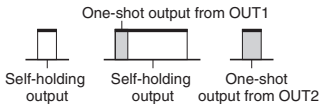
4. The meaning of the H and L symbols in the tables is explained below.

Input method / Symbol	No-voltage input (NPN input)	Voltage input (PNP input)
H	Short-circuit	4.5 to 30 VDC
L	Open	0 to 2 VDC

Input/Output Mode Settings

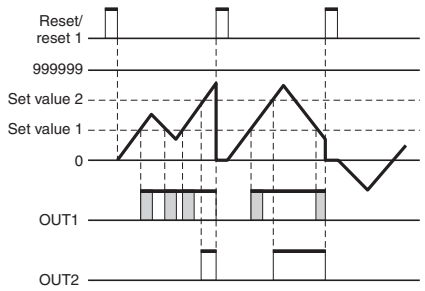
I/O Functions for Counter Operation

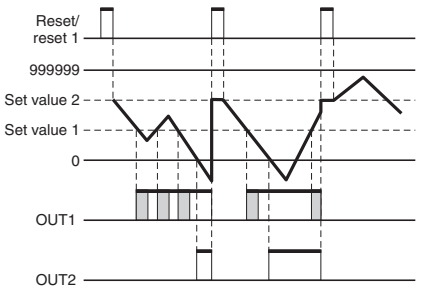
If a 1-stage model or 2-stage model is used as twin counter, the operation for output 2 will be performed. When using a 2-stage model as a 1-stage preset counter, total and preset counter, or dual counter, OUT1 and OUT2 turn ON and OFF simultaneously.

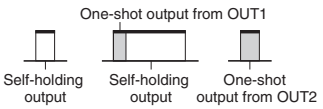


(The one-shot output time can be set in the range 0.01 to 99.99s.)

		Input mode		Operation after count completion
		UP	DOWN	
Output mode setting	N			The outputs and present value display are held until reset/reset 1 is input.
		UP/DOWN A, B, C	UP/DOWN D, E, F	
				
	F	UP	DOWN	The present value display continues to increase/ decrease. The outputs are held until reset/reset 1 is input.
				
		UP/DOWN A, B, C	UP/DOWN D, E, F	
				

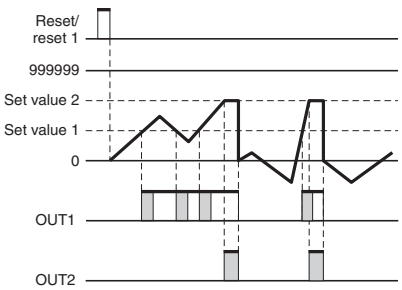


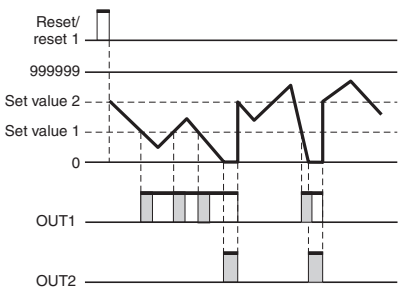


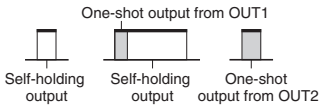


(The one-shot output time can be set in the range 0.01 to 99.99s.)

		Input mode		Operation after count completion
Output mode setting	C	**UP**	**DOWN**	As soon as the count reaches SV, the present value display returns to the reset start status. The present value display does not show the present value upon count-up. The outputs repeat one-shot operation. OUT1 self-holding output turns OFF after the OUT2 one-shot output time. The OUT1 one-shot output time is independent of OUT2.
				
		UP/DOWN A, B, C	**UP/DOWN D, E, F**	
				
	R	**UP**	**DOWN**	The present value display returns to the reset start status after the one-shot output time. The outputs repeat one-shot operation. OUT1 self-holding output turns OFF after the OUT2 one-shot output time. The OUT1 one-shot output time is independent of OUT2.
				
		UP/DOWN A, B, C	**UP/DOWN D, E, F**	
				

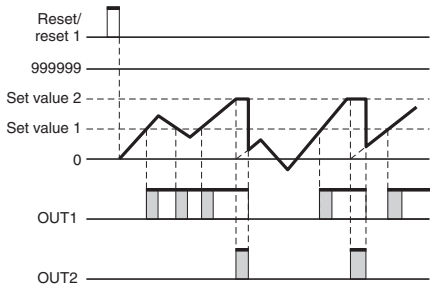


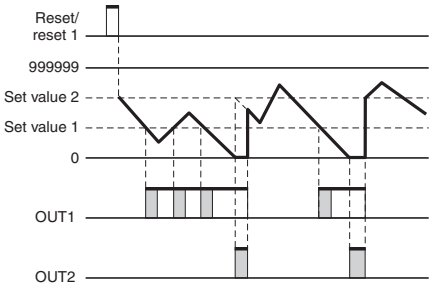


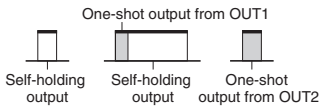


(The one-shot output time can be set in the range 0.01 to 99.99s.)

		Input mode		Operation after count completion
Output mode setting	K-1	**UP**	**DOWN**	The present value display continues to increase/decrease. OUT1 self-holding output turns OFF after the OUT2 one-shot output time. The OUT1 one-shot output time is independent of OUT2.
				
		UP/DOWN A, B, C	**UP/DOWN D, E, F**	
				
	P	**UP**	**DOWN**	The present value display does not change during the one-shot output time period, but the actual count returns to the reset start status. The output will return to one-shot mode. The outputs repeat one-shot operation. OUT1 self-holding output turns OFF after the OUT2 one-shot output time. The OUT1 one-shot output time is independent of OUT2.
				
		UP/DOWN A, B, C	**UP/DOWN D, E, F**	
				

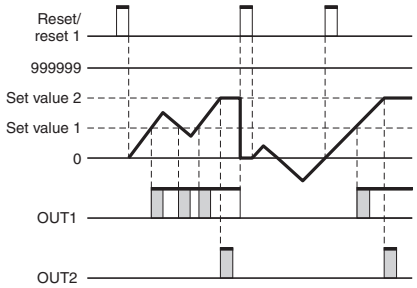


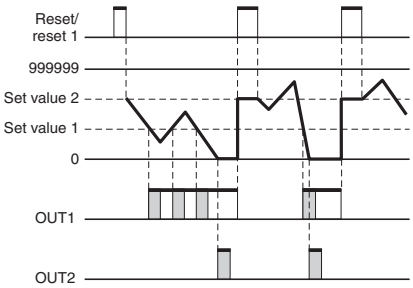




(The one-shot output time can be set in the range 0.01 to 99.99s.)

		Input mode		Operation after count completion
Output mode setting	Q	**UP**	**DOWN**	The present value continues to increase/decrease for the one-shot output time, but returns to the reset start status after the one-shot output time has elapsed. The outputs repeat one-shot operation. OUT1 self-holding output turns OFF after the OUT2 one-shot output time. The OUT1 one-shot output time is independent of OUT2.
				
		UP/DOWN A, B, C	**UP/DOWN D, E, F**	
				
	A	**UP**	**DOWN**	The present value display and OUT1 self-holding output is held until reset/reset 1 is input. OUT1 and OUT2 are independent.
				
		UP/DOWN A, B, C	**UP/DOWN D, E, F**	
				





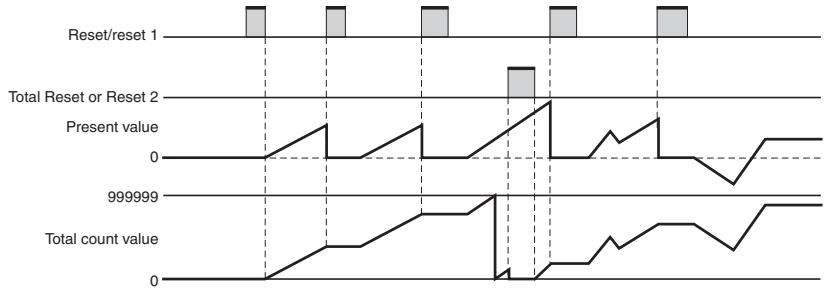
Note: 1. When the present value reaches 999999, it returns to 0.
2. Counting cannot be performed during reset/reset 1 input.
3. If reset/reset 1 is input while one-shot output is ON, one-shot output turns OFF.
4. If there is power interruption while output is ON, output will turn ON again when the power supply has recovered, if memory backup is enabled.
For one-shot output, output will turn ON again for the duration of the output time setting once the power supply has recovered.
5. Do not use the counter function in applications where the count may be completed (again) while one-shot output is ON.
6. The setting range is 0 to 999999.

		Input mode	Operation after count completion
		UP/DOWN A, B, C	
Output mode setting	K-2		The display continues to increase/decrease until the overflow or underflow value is reached. One-shot output only.
	D		The display continues to increase/decrease until the overflow or underflow value is reached. The outputs are ON while the count is equal.
	L		The display continues to increase/decrease until the overflow or underflow value is reached. OUT1 is held while the present value is less than or equal to set value 1. OUT2 is held while the present value is greater than or equal to set value 2.
	H		The display continues to increase/decrease until the overflow or underflow value is reached. OUT1 is held while the present value is greater than or equal to set value 1. OUT2 is held while the present value is greater than or equal to set value 2. ✻ H mode is available only when using a model as a 2-stage counter.

Note: 1. Counting cannot be performed during reset/reset 1 input.
2. If reset/reset 1 is input while one-shot output is ON, one-shot output turns OFF.
3. If there is power interruption while output is ON, output will turn ON again when the power supply has recovered, if memory backup is enabled.
For one-shot output, output will turn ON again for the duration of the output time setting once the power supply has recovered.
4. Do not use the counter function in applications where the count may be completed (again) while one-shot output is ON.
5. The set value is from –99999 to 999999.

Total and Preset Counter Operation

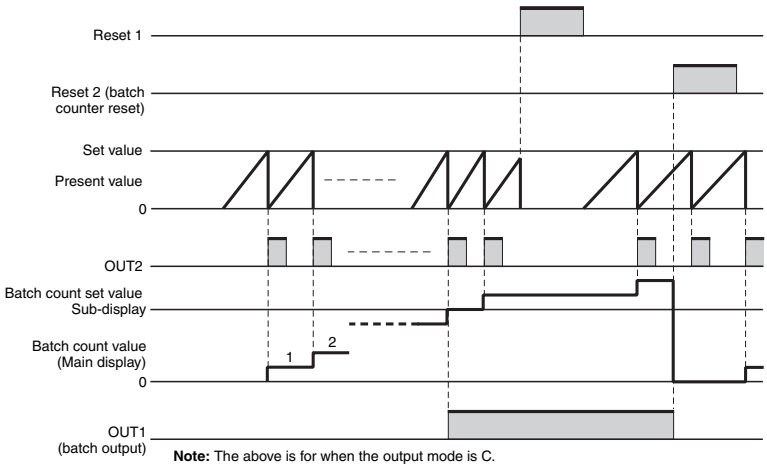
The H7CC has a total counter, separate from the 1-stage preset counter, for counting the total accumulated value.



- The total counter continues to count the total accumulated value when the present value is reset using reset/reset 1 input (reset operation).
- The total count value is reset when the total reset/reset 2 input is turned ON.
  If reset operation is performed while the total count value is displayed, the total count value is reset. The present value is also reset at this time.
- The counting range of the total counter is −99,999 to 999,999. The total count value returns to 0 when it reaches 999,999.

Batch Counter Operation

The H7CC has a batch counter, separate from the 1-stage preset counter, for counting the number of times the count has been completed.



Note: The above is for when the output mode is C.

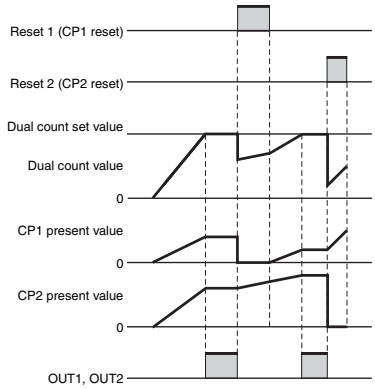
- The batch counter continues after count completion.
- Batch output is held until batch counter reset is input.
- When the batch counter reset input is turned ON, the batch count value is reset, and batch output turns OFF.
- If reset operation is performed while the batch count value is displayed, the batch count value is reset and batch output turns OFF. The present value is also reset at this time.
- The count value can be incremented and decremented.
  The batch count is only incremented.
- The maximum counting speed for batch counter operation is 5 kHz. The batch counter counts the number of times the count reaches the set value.

Note: **1.** The batch count value is held at 0 during batch counter reset input.
2. If the batch count set value is 0, batch count will be performed but there will be no batch output.
3. The batch count value returns to 0 when it reaches 999,999.
4. Once batch output has been turned ON, it will return to the ON after power interruptions, if memory backup is enabled.
5. If the batch count set value is changed from a value that is greater than the batch count value to one that is less, batch output will turn ON.
6. After batch output turns ON, the ON state will be held even if the batch count set value is changed to a value greater than the batch count value.

Dual Counter Operation

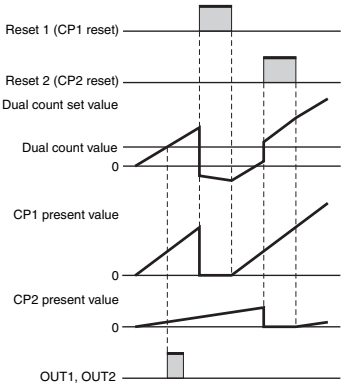
Using the dual counter allows the count from 2 inputs to be added or subtracted and the result displayed. It is possible to specify a set value for which output turns ON when the set value matches the added or subtracted result.

(1) Dual Count Calculating Mode = ADD
Dual count value = CP1 PV + CP2 PV



Note: The above is for when the output mode is N.

(2) Dual Count Calculating Mode = SUB
Dual count value = CP1 PV − CP2 PV



Note: The above is for when the output mode is K-2. SUB mode can be used only when K-2, D, L, or H is selected as the output mode with 6-digit models.

- The operation after count completion for the dual counter value is determined by the output mode.
- The CP1 present value is reset when reset 1 input is turned ON.
  The CP2 present value is reset when reset 2 input is turned ON.
- If reset operation is performed while the dual count value, CP1 present value, or CP2 present value is displayed, all of the present values are reset and outputs turn OFF. At this time, counting is not possible for CP1 or CP2 inputs.

Note: **1.** Counting is not possible for CP1 during reset 1 input. CP2 will not be affected. The dual count value will be calculated based on a CP1 present value of 0.
2. Counting is not possible for CP2 during reset 2 input. CP1 will not be affected. The dual count value will be calculated based on a CP2 present value of 0.
3. The counting range for the dual count value is −99,999 to 999,999.
The counting ranges for the CP1 present value and CP2 present value are 0 to 999,999.
If a present value exceeds 999,999, FFFFFF will be displayed to indicate an overflow, and all counting will stop.

Twin Counter Operation

Two independent counters are built in.

	Counter 1	Counter 2
Counter input	CP1	CP2
Reset input	Reset 1	Reset 2
Present value display and setting		
Reset operation	Only counters appearing on the display will be reset.	

Note: 1. Only 2-stage models
2. Increment mode only for counters 1 and 2.
3. The settings for prescaling and the decimal point are used by both counter 1 and 2.

Reset Function List

I/O Functions for Counter Operation

Function	1-stage/2-stage preset counter	Total and preset counter		Batch counter		Dual counter		Twin counter	
Screen displayed in run mode	**Present value/ set value (1, 2)**	**Present value/ set value**	**Total count value**	**Present value/ set value**	**Batch count value/ batch count set value**	**Dual count value/dual count set value**	**CP1 present value/ CP2 present value**	**Present value 1/ Set value 1**	**Present value 2/ Set value 2**
Reset/reset 1	Present value and output reset.	Present value and output reset.		Present value and output reset.		Only the CP1 present value is reset.		Only the CP1 present value is reset.	
Total reset or reset 2	No effect	Only the total count value is reset.		Batch count value and batch output reset.		Only the CP2 present value is reset.		Only the CP2 present value is reset.	
Reset operation	Present value and output reset.	Present value and output reset.	Present value, total count value, and output reset.	Present value and output reset.	Present value, batch count value, output and batch output reset.	CP1 present value, CP2 present value, dual count value, and output reset.		CP1 present value reset	CP2 present value reset

- The following table shows the delay from when the present value passes the set value until the output is produced.

Actual measurements in N and K-2 modes (Reference values)

Control output type	Max. counting speed	Output delay time
Contact output	30 Hz	16.4 to 18.2 ms
	5 kHz	3.9 to 5.4 ms
Transistor output	30 Hz	11.2 to 14.2 ms
	5 kHz	0.09 to 0.1 ms

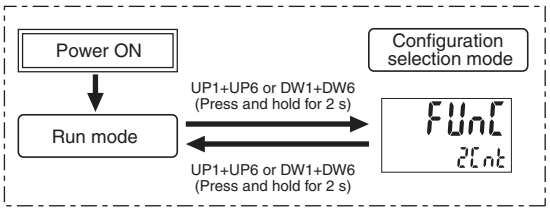
Note: The above times may vary slightly depending on the mode or operating conditions.

Setting Procedure Guide
Tachometer Operation

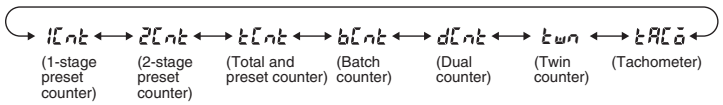
Step1 The H7CC-AW□/AU□ is a Counter that contains more than one functional counter.
At the time of delivery ✻, the H7CC is set to the 1-stage preset counter configuration or 2-stage preset counter configuration.
Enter configuration selection mode using the following chart and set the tachometer mode.

✻ Table Default Modes and Selectable Functions

Model	Default mode	Selectable mode
H7CC-AW	2-stage preset counter	Any mode
H7CC-AU	1-stage preset counter	Any mode

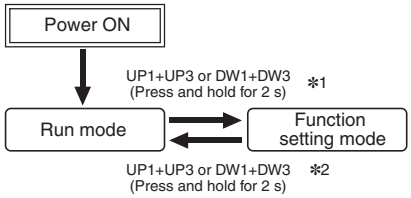


Select the function using the UP1 Key (DW1 Key) .



Step2 Parameters are set with the operation keys on the front panel.

Change to Function Setting Mode.

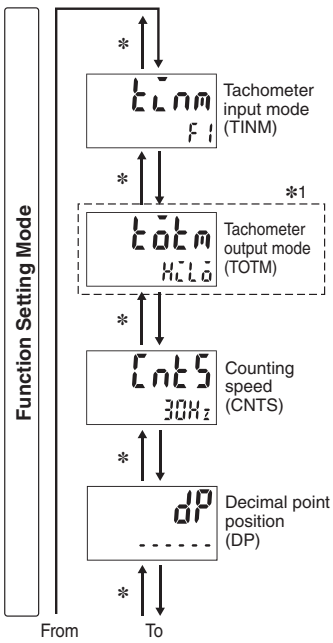


For details on operations and display in run mode, refer to page 37.

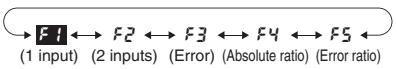
✻1 If the mode is switched to the function setting mode during operation, operation will continue.
✻2 Changes made to settings in function setting mode are enabled for the first time when the mode is changed to run mode. Also, when settings are changed, the counter is reset (present value initialized and output turned OFF) on returning to run mode.

The characters displayed in reverse video are the default settings.
In the function setting mode, the status indicator of the keys that can be set lights up.
(Example) In the case of the prescale value (PSCL)
A value from 0.001 to 99.999 can be set, and therefore, the status indicator of the UP1 Key to UP5 Key (DW1 Key to DW5 Key) lights up.

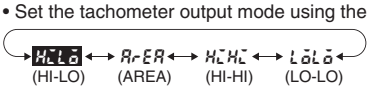
✻ Use UP1+UP3 to move up and DW1+DW3 to move down



• Set the tachometer input mode using the UP1 Key (DW1 Key).



• Set the tachometer output mode using the UP1 Key (DW1 Key).

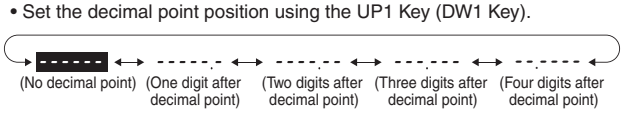


Note: The indicator display is disabled during the upper or lower limit setting.

• Set the counting speed using the UP1 Key (DW1 Key).

Note: Even if 10 kHz is selected when the tachometer input mode is F2 to F5, the counting speed will be 5 kHz.

• Set the decimal point position using the UP1 Key (DW1 Key).



Note: "--.----" will be displayed when pulse width measurement is set or when the display unit is set to seconds.

✻1 Set tachometer output modes 1 and 2 using the UP1 Key (DW1 Key).
Note: Displayed only when the tachometer input mode is F2 (2 inputs).

✻ Use UP1+UP3 to move up and DW1+DW3 to move down
Function Setting Mode
PSCL 1.000
Prescale value (PSCL)
• Set each digit using the individual UP1 to UP5 Keys (DW1 to DW5 Keys).
0.001 ~ 1.000 ~ 99.999
(0.001) (1.000) (99.999)
AVGT SMP
Averaging method (AVGT)
• Set the averaging method using the UP1 Key (DW1 Key).
SMP ↔ MV
(SMP) (Simple averaging)
(MV) (Moving average)
AVGN OFF
Average processing (AVGN)
• Set the number of averaging times using the UP1 Key (DW1 Key).
OFF ↔ 2 ↔ 4 ↔ 8 ↔ 16
(No average processing) (Average of 2 measurements) (Average of 4 measurements) (Average of 8 measurements) (Average of 16 measurements)
AUT00 999.9
Auto-zero time (AUT00)
• Set each digit using the individual UP1 to UP4 Keys (DW1 to DW4 Keys).
0.1 ~ 999.9
(0.1 s) (999.9 s)
STMR 0.0
Startup time (STMR)
• Set each digit using the individual UP1 to UP3 Keys (DW1 to DW3 Keys).
0.0 ~ 99.9
(0.0 s) (99.9 s)
IMOD NPN
NPN/PNP input mode (IMOD)
• Set the NPN/PNP input mode using the UP1 Key (DW1 Key).
NPN ↔ PNP
(NPN input) (PNP input)
DHLD OFF
Peak/bottom hold enabled (DHLD)
• Enable or disable the peak/bottom hold using the UP1 Key (DW1 Key).
OFF ↔ ON
(Disabled) (Enabled)
HYS 0
Output hysteresis (HYS)
• Set the output hysteresis using the UP1 to UP5 Keys (DW1 to DW5 Keys).
0 ~ 99999
(0) (99999)
Note: The position of the decimal point for the value after prescaling will be set according to the decimal point position setting.
OFFD 0.00
Output OFF delay (OFFD)
• Set each digit using the individual UP1 to UP4 Keys (DW1 to DW4 Keys).
0.00 ~ 19.99
(0.00 s) (19.99 s)
SL-H 999999
Set value upper limit (SL-H)
• Set each digit using the individual UP1 to UP6 Keys (DW1 to DW6 Keys).
1 ~ 999999
(1) (999999)
Note: The position of the decimal point for the value after prescaling will be set according to the decimal point position setting.
OTST OFF
Output allocation (OTST)
• Set the output allocation using the UP1 Key (DW1 Key).
OFF ↔ ON
(OFF) (ON)
Note: OFF: Output 1 (OUT1) = 12, 13 Output 2 (OUT2) = 3, 4, 5/
ON: Output 1 (OUT1) = 3, 4, 5 Output 2 (OUT2) = 12, 13 (The numbers are the terminals numbers.)
KYPT KP-1
Key protect level (KYPT)
• Set the key protect level using the UP1 Key (DW1 Key).
KP-1 ↔ KP-2 ↔ KP-3 ↔ KP-4 ↔ KP-5 ↔ KP-6 ↔ KP-7
(KP-1) (KP-2) (KP-3) (KP-4) (KP-5) (KP-6) (KP-7)

Output 1 (OUT1) inversion (OT1I)
• Set the output 1 (OUT1) inversion using the UP1 Key (DW1 Key).
(Normally Open) (Normally Close)
Output 2 (OUT2) inversion (OT2I)
• Set the output 2 (OUT2) inversion using the UP1 Key (DW1 Key).
(Normally Open) (Normally Close)
Pulse cycle measurement/ pulse width measurement (CALM)
• Set pulse cycle measurement or pulse width measurement using the UP1 Key (DW1 Key).
(Pulse cycle measurement) (Pulse width measurement)
Display unit (UNIT)
• Set the display unit using the UP1 Key (DW1 Key).
(Hz) (s)
Note: Displayed only when pulse cycle measurement is used.
Measurement interval (INTV)
• Set each digit using the individual UP1 Key (DW1 Key).
(200 ms) (Cont (10 ms min.))
Note: Displayed only if the measurement speed is 10 kHz when pulse cycle measurement is used.
Indicator display mode (INDC)
• Set the indicator display mode using the UP1 Key (DW1 Key).
(Count status display)
(Indicator display is turned OFF, and the status indicator is all off.)
(Indicator display is turned OFF, and the status indicator is all lit.)
✻2
Output ON count alarm set value/ monitor value
✻2 Set each digit using the individual UP1 to UP4 Keys (DW1 to DW4 Keys).
Output 1 (OUT1) ON count alarm set value (ON1A)
(0 × 1000 times)
(9999 × 1000 times)
Output 2 (OUT2) ON count alarm set value (ON2A)
(0 × 1000 times)
(9999 × 1000 times)
Output 1 (OUT1) ON count monitor value (ON1C)
Note: The monitor value is only displayed. It cannot be set.
Output 2 (OUT2) ON count monitor value (ON2C)
Note: The monitor value is only displayed. It cannot be set.
Cumulative run time (OT-A) alarm set value
• Set each digit using the UP1 Key (DW1 Key).
(0.0 year) (10.0 years) (99.9 years)
Cumulative run time (OT-C) monitor value
Note: The monitor value is only displayed. It cannot be set.
Software version (ver.)
Note: The monitor value is only displayed. It cannot be set.

Explanation of Functions
Tachometer Operation

Tachometer Input Mode (tCnd)

Set the count input mode to one of the following: 1 input (F1), 2 inputs (F2), error (F3), absolute ratio (F4), or error ratio (F5).

Input mode	Input	Internal processing	Application
1 input	Count 1	None	Operation with only one input.
2 inputs	Counts 1 and 2	None	Operation with two independent inputs.
Error	Counts 1 and 2	Count 1 input – Count 2 input	Measuring the difference between two inputs (error in number of revolutions).
Absolute ratio	Counts 1 and 2	Count 1 input ÷ Count 2 input	Measuring the ratio of two inputs (ratio of number of revolutions).
Error ratio	Counts 1 and 2	(Count 1 input – Count 2 input) ÷ Count 2 input	Measuring the ratio of error for two inputs (measuring the error ratio of number of revolutions).

Tachometer Output Mode (tOtM)

Set the output method for control output based on the comparison value. Upper and lower limit (HI-LO), area (AREA), upper limit (HI-HI), and lower limit (LO-LO) can be set.
(For details on the output modes, refer to *Output Mode Settings and Operation* on page 38.)

Counting Speed (Cnt5)

Set the maximum counting speed (30 Hz/10 kHz) for CP1 input.
If contacts are used for input signals, set the counting speed to 30 Hz.
Processing to eliminate chattering is performed for this setting.

Decimal Point Position (dP)

Decide the decimal point position for the measurement value, OUT1 set value, and OUT2 set value.

Prescale Value (PSCL)

It is possible to display the rate of rotation or the speed of a device or machine to which the H7CC is mounted by converting input pulses to a desired unit.
If this prescaling function is not used, the input frequency (Hz) will be displayed.
It is also possible to specify time (seconds) as the display value. Refer to *Display Unit* on page 35 for details.
The relationship between display and input is determined by the following equation. Set the prescale value according to the unit to be displayed.

Displayed value = f × α
f: Input pulse frequency (number of pulses in 1 second)
α: Prescale value

(1) Displaying Rotation Rate

Display unit	Prescale value (α)
rpm	1/N × 60
rps	1/N

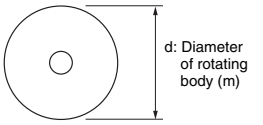
N: Number of pulses per revolution

Example: To display the rate of rotation for a machine that outputs 5 pulses per revolution in the form □□.□ rpm:
1. Set the decimal point position to 1 decimal places.
2. Using the formula, set the prescale value (α) to 1/N × 60 = 60/5 = 12.

(2) Displaying Speed

Display unit	Prescale value (α)
m/min	πd × 1/N × 60
m/s	πd × 1/N

N: Number of pulses per revolution
d: Diameter of rotating body (m)
πd: Circumference (m)



- Observe the following points when setting a prescale value.
  Set the set value to a value less than {Maximum countable value – Prescale value}.
  Example: If the prescale value is 1.25 and the counting range is 0.000 to 999.999, set the set value to a value less than 998.749 (= 999.999 – 1.25).
  If the set value is set to a value greater than this, output will not turn ON.
- Output will turn ON, however, if a present value overflow occurs (FFFFFF}.

Note: If the prescale value setting is incorrect, a counting error will occur. Check that the settings are correct before using this function.

Averaging Method (AvGt)

A simple average or moving average can be selected for the averaging. With the moving average method, the average of the measurement values is displayed each sampling cycle, in contrast to a simple average, with which the the average of the set number of samples is displayed.

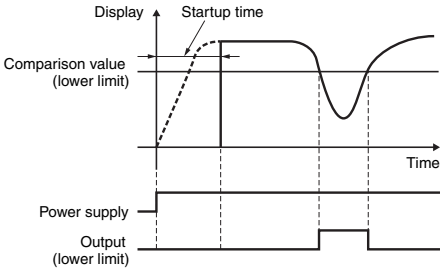
Number of Averaging Times (AvGn)

Flickering display and output chattering can be prevented using average processing. Average processing can be set to one of four levels: no average processing, 2 times (i.e., the average of 2 measurement values), 4 times, 8 times, or 16 times.
The measurement cycle will be equal to the sampling cycle multiplied by the average processing setting (i.e., the number of times).
Average processing enables stable displays even for fluctuating input signals. Set the optimum number of times for the application.

Auto-zero Time (AUtO)

The display can be force-set to 0 if there is no pulse for a certain period of time. This time is called the auto-zero time. Set the auto-zero time to a time slightly longer than the estimated interval between input pulses. Accurate measurement is not possible if the auto-zero time is set to a time shorter than the input pulse cycle. Setting a time that is too long may also result in problems, such as a time-lag between rotation stopping and the alarm turning ON. The auto-zero time is not applied to pulse width measurements.

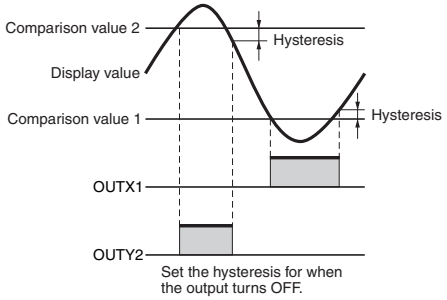
Startup Time (Stmr)
To prevent undesired outputs resulting from unstable inputs immediately after the power supply is turned ON, it is possible to prohibit measurement for a set period of time, the startup time.
It can also be used to stop measurements and disable outputs until the rotating body reaches the normal rate of rotation, after the power supply to the H7CC and rotating body are turned ON at the same time.



NPN/PNP Input Mode (InMd)
Select either NPN input (no-voltage input) or PNP input (voltage input) as the input format.
When using a two-wire sensor, select NPN input. The same setting is used for all external inputs.
For details on input connections, refer to *Input Connections* on page 9.

Peak/bottom Hold Enabled (dHLd)
This function records the peak and bottom (i.e., minimum) after counting starts (after turning ON the power supply or changing the configuration selection mode or function setting). The peak value is also held when the power supply is interrupted.

Output Hysteresis (HYS)
This setting can be used to prevent output chattering if the measurement value fluctuates slightly near the set value.
The measurement value after prescaling is set.



Output OFF Delay (oFFd)
This function delays the timing for turning OFF comparative output by a certain time.
The ON time can be held for the set time if the comparative result changes in a short time.
Operation will continue and outputs will not change when holding the value.

Set Value Upper Limit (SL-H)
Set the upper limit for the set value when it is set in run mode. The limit can be set to between 1 and 999999.

Key Protect Level (KYPt)
Set the key protect level.
Refer to *Key Protect Level* on page 40.

Pulse Cycle Measurement/Pulse Width Measurement (InLm)
Set the measurement mode to pulse cycle measurement or pulse width measurement.
With pulse cycle measurement, the number of pulse cycles that occur in 1 s is measured.
With pulse width measurement, the ON time for one pulse is measured.
An input OFF period of at least 20 ms is required for pulse width measurement.
If there is no input pulse during pulse width measurement, the previously measured value will be held.

Display Unit (UnIt)
When pulse cycle measurement is used, set the display unit to Hz (hertz) or s (seconds).

Counting Interval (InTm)
If the measurement speed is 10 kHz when pulse cycle measurement is used, set the measurement interval to 200 ms or Cont (10 ms min.).

ON Count Alarm Set Values for Outputs 1 and 2 (OUT1 and OUT2) (on1A and on2A)
The output ON count for notifying the replacement time can be set.
For details, refer to page 41.

ON Count Monitor Values for Outputs 1 and 2 (OUT1 and OUT2) (on1C and on2C)
The monitor value for output 1 and 2 (OUT1 and OUT2) is only displayed. It cannot be set.
The output ON count will be 1,000 times the displayed value.

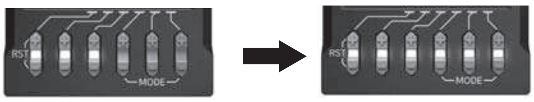
Output Allocation (Settings applicable to only H7CC-□W(U)□) (otSt)
Set the allocation of outputs 1 and 2 (OUT1 and OUT2). If output allocation is OFF, output 1 (OUT1) is allocated to terminals (12) and (13), and output 2 (OUT2) is allocated to terminals (3), (4), and (5). If output allocation is ON, output 1 (OUT1) is allocated to terminals (3), (4), and (5), and output 2 (OUT2) is allocated to terminals (12) and (13).

Output inversion (ot1C, ot2C)
Set logical inversion of output ON/OFF. In the case of two outputs, it is possible to individually set output inversion for each of output 1 and output 2 (OUT1 and OUT2). If output inversion is n-o (Normally Open), the output turns ON when the set value is reached. If output inversion is n-C (Normally close), the output turns OFF when the set value is reached.

Indicator Display Mode (indC)

Settings can be made to display the measurement value in status indicator. When this mode is ON, and "Upper and lower limit" or "Area" has been selected in the tachometer output mode, the status indicator changes in accordance with the ratio of the measurement value to the comparison value. In the case of ALOF, the indicator display is turned OFF, and the status indicator is all off. In the case of ALLT, the indicator display is turned OFF, and the status indicator is all lit.

(Example 1) When the upper and lower limits have been selected
The status indicator lights up when the status reaches 1/6, 2/6, 3/6 (50%), 4/6, 5/6, 6/6 (100%) in accordance with the ratio of the measurement value to the comparison value. If comparison value 1 = 2000 and comparison value 2 = 2300 have been set, all status indicators are off when the measurement value is below 2050, the three status indicators on the left light up when the measurement value reaches 2150, and all status indicators light up when the measurement value becomes 2300 or more.



Three indicators light up when the status reaches 50% | All indicators light up when the status reaches 100%

Cumulative Run Time Alarm Set Value (ot-A)

The cumulative run time for notifying the replacement time can be set. For details, refer to page 41.

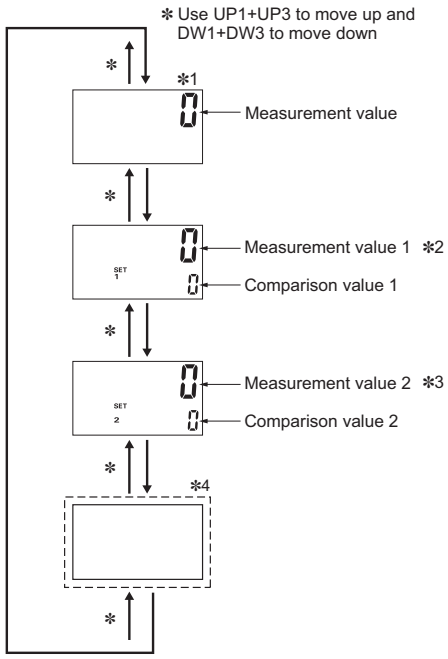
Cumulative Run Time Monitor (ot-C)

The cumulative run time is displayed. It is not a setting item. The numerical values are displayed in increments of 0.1 years.

Operation in Run Mode

Tachometer Operation

• Set each digit using the individual UP1 to UP6 Keys (DW1 to DW6 Keys).



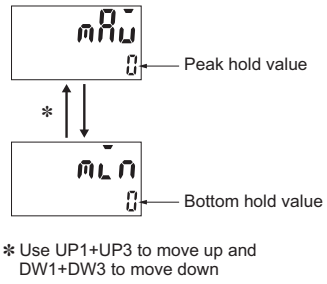
- **Measurement value**
  Displays the currently measured value.

- **Comparison value 1/Comparison value 2**
  Set comparison value 1 and comparison value 2. The measurement value is compared to comparison value 1 and comparison value 2 and output is made according to the selected output mode.

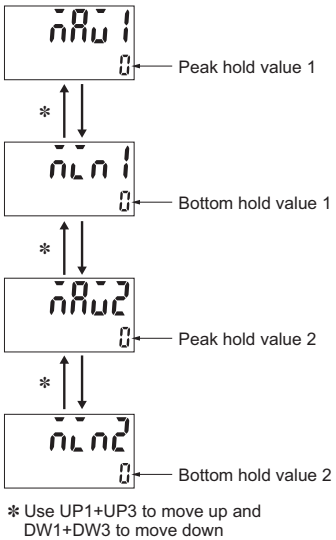
∗1. Not displayed for the 2-input mode.
∗2. Measurement value 1 for the 2-input input mode.
∗3. Measurement value 2 for the 2-input input mode.

∗4. Peak/bottom hold enabled

Displayed when the input mode is not 2 inputs.



Displayed for the 2-input input mode.



- **Peak/bottom hold value**
  The peak (maximum) and bottom (minimum) values are displayed after counting starts.

- **Peak/bottom hold value 1 and 2**
  Peaks (maximums) 1 and 2 and bottoms (minimums) 1 and 2 are displayed after counting starts.

Note: The hold values will be initialized when reset operation is performed or reset 1 input is turned OFF while peak/bottom hold values 1 and 2 are being displayed. (The reset 2 input operates in the same way if the input mode is set to 2-input mode.)

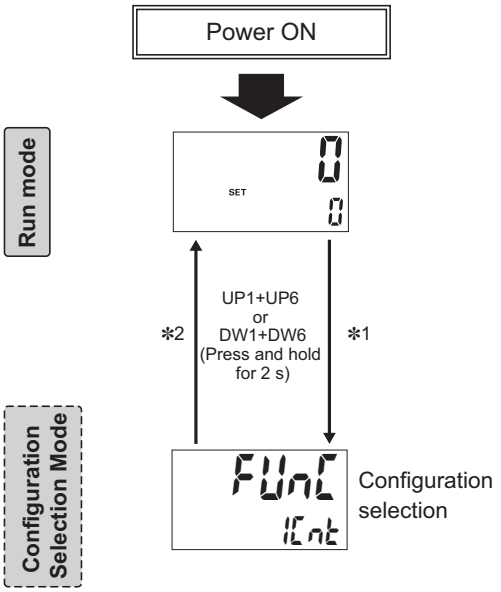
Switching between Preset Counter, Total and Preset Counter, Batch Counter, Dual Counter, Twin Counter, and Tachometer Operation

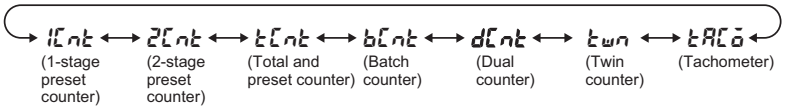
Select which H7CC configuration is used (i.e., preset counter, total and preset counter, batch counter, dual counter, twin counter, or tachometer) in configuration selection mode.



Note

To shift to the configuration selection mode, press UP1+UP6 or DW1+DW6 for 2 seconds or longer.

Select the function using the UP1 Key (DW1 Key) .



Note: The modes that can be selected depend on the model. (Refer to the Table.)

Note: At the time of delivery ∗, the H7CC is set to the 1-stage preset counter configuration or 2-stage preset counter configuration.

∗ Table Default Modes and Selectable Functions

Model	Default mode	Selectable mode
H7CC-AW	2-stage preset counter	Any mode
H7CC-AU	1-stage preset counter	Any mode
Other models	1-stage preset counter	1-stage preset or total preset counter only

∗1 When the mode is changed to configuration selection mode, the present value is reset, outputs turn OFF, and counting (measuring) stops.
∗2 Setting changes made in configuration selection mode are enabled when the mode is changed to run mode. If the configuration is changed, the set value (or set value 1 and set value 2), comparison value 1 and comparison value 2 are initialized.

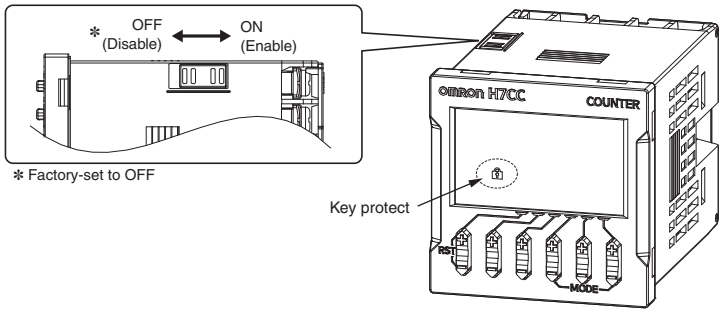
Hold Function

The measurement value (display value) and output are sustained while the hold input is ON.
Note: The output will maintain the current status when hold operation is performed.

Example:

Output mode setting	Operation
Lower limit	
Key Protect Level

It is possible to prevent setting errors by prohibiting the use of certain operation keys by specifying the key protect level (KP-1 to KP-7) when the key-protect switch is set to ON. The key protect level is set in the function setting mode.
The key protect indicator is lit when the key-protect switch is ON.



Level	Description	Details			
		Changing modes*	Switching display during operation	Reset operation	Up/Down Keys
KP-1 (default setting)		Invalid	Valid	Valid	Valid
KP-2		Invalid	Valid	Invalid	Valid
KP-3		Invalid	Valid	Valid	Invalid
KP-4		Invalid	Valid	Invalid	Invalid
KP-5		Invalid	Invalid	Invalid	Invalid
KP-6		Invalid	Invalid	Valid	Valid
KP-7		Invalid	Invalid	Invalid	Valid

✻ Changing mode to configuration selection mode or function setting mode.

Replacement Time Notification Function

The counter includes parts such as electrolytic capacitors and relays that deteriorate with time or with repeated operations.
The H7CC is equipped with a function for notifying the replacement time by the cumulative run time and ON count of the relay contact.

When either one of the deterioration of the electrolytic capacitors due to the cumulative run time or the deterioration of the relay contact due to the output ON count reaches the replacement time, RPLC (REPLACE) can be displayed on the Timer. For details on RPLC display, refer to *Self-diagnosis Function* on this page.

Cumulative Run Time Alarm Set Value (oLt-A)

The cumulative run time can be set in a range from 0.0 to 99.9 years.
The replacement time notification function is disabled if 0 is set.
10 years is set in the default settings.
If the cumulative run time reaches the alarm set value or above, an RPLC (replacement time) error can be displayed on the Timer.

The extent of deterioration of electrolytic capacitors varies depending on the capacitor temperature and usage period. According to the default settings, the ambient temperature is 35°C, the output load is 50%, and the utilization rate is 100%. If you change the usage conditions to actual ones, use H7CC replacement time calculation tool on the OMRON website.

Output ON Count Alarm Set Value (on-A, on1A, on2A)

Set the alarm value for the output ON count.
The limit can be set between 0×1000 (0 times) and 9999×1000 (9,999,000 times). Only the underlined values are set. The alarm will be disabled if 0 is set.
100,000 times is set in the default settings.
If the total output ON count reaches the alarm set value or above, an RPLC (replacement time) error can be displayed on the Timer.

Self-diagnostic Function

The following displays will appear if an error occurs.

Main display	Sub-display	Description	Output status	Correction method	Set value after reset
----- ✻4	No change	Present value underflow ✻2	No change	Either perform reset operation or turn ON reset input.	No change
FFFFF ✻4	No change	Present value overflow ✻3	No change	Either perform reset operation or turn ON reset input. ✻5	No change
E1	Not lit	CPU error	OFF	Either perform reset operation or reset the power supply.	No change
E2	Not lit	Memory error (RAM)	OFF	Turn ON the power again.	No change
E2	Sum	Memory error (non-volatile memory) ✻1	OFF	Reset operation	Factory setting
RPLC ✻7	No change	The cumulative run time or output ON count reaches the replacement time	No change	Reset operation ✻6	No change

✻1. This includes times when the life of the non-volatile memory has expired.
✻2. This occurs if the present value or total count value falls below –99999.
✻3. This occurs in the following conditions if the present value (i.e., measurement value) exceeds 999999.
- For Output Modes K-2, D, L, or H
- Dual counter or tachometer operation is used.

✻4. Display flashes.(1-second cycles)
✻5. This does not apply when tachometer operation is used.
✻6. This is displayed if the alarm value setting for either of the two outputs is exceeded if a model with two outputs is used.The total ON count will not be cleared by reset operation.
✻7. The normal display and RPLC will appear alternately.
When reset operation is performed, RPLC will not be displayed even if the alarm set value is exceeded.
(Monitoring is possible, however, because the counter will continue without the cumulative run time and output ON count being cleared.)
RPLC is displayed again if the power is turned OFF/ON after the RPLC display is cleared during recovery by the reset operation. If you do not want to display RPLC when the power is turned OFF/ON, either change the alarm set value to the present value or above, or change the alarm set value to 0 to disable it.

H7CC-R□ Tachometer

- Equipped with a replacement time notification function.
- The white-color display further improves visibility and the color universal design is used. And the Up/Down Keys make it easier to use the Tachometer.
- Compatible with the ratings, characteristics, and functionality of the H7CX-R-N.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Specifications

Ratings

Classification		Tachometer				
Item	Model	H7CC-R11□				H7CC-R11W□
Input mode		1 input only				2 inputs only
Ratings	Power supply voltage ✻1	• 100 to 240 VAC, 50/60 Hz • 12 to 24 VDC or 48 VAC, 50/60 Hz				
	Operating voltage fluctuation range	85% to 110% of rated supply voltage (90% to 110% at 12 to 48 VDC)				
	Power consumption	Approx. 6.8 VA at 100 to 240 VAC, Approx. 5.5 VA/ 3.3 W at 24 VAC/12 to 48 VDC				
Mounting method		Flush mounting or surface mounting				
External connections		11-pin socket				
Degree of protection		IEC IP66 for panel surface only and when Y92S-P6 Waterproof Packing is used				
Input signals		Count and hold				Count 1 and count 2
Pulse measurement method		Tachometer mode (cycle measurement)		AMD-compatible mode (continuous measurement)		Tachometer mode (cycle measurement)
Maximum counting speed		30 Hz (minimum pulse width: 16.7 ms)	10 kHz (minimum pulse width: 0.05 ms)	---		30 Hz (minimum pulse width: 16.7 ms) or 5 kHz (minimum pulse width: 0.1 ms) (selectable)
Minimum input signal width		---		10 ms	1 ms	---
Measuring ranges		0.001 Hz to 30.00Hz	0.001 Hz to 10 kHz	0.026 to 999999 s	0.003 to 999999 s	0.01 to 5k Hz
Sampling cycle		200 ms min.		Continuous measurement (minimum interval of 10 ms)		200 ms min.
Display refresh cycle		• Input pulse of 5 Hz min. Averaging not used: 200 ms Averaging used: 200 multiplied by the averaging setting (ms) • Input pulse of less than 5 Hz Averaging not used: Two times the maximum input pulse cycle Using averaging: Two times the maximum of the input pulse cycle multiplied by the averaging setting.				
Measuring accuracy		±0.1% FS ±1 digit max. (at 23 ±5°C)				
Output mode		HI-LO, AREA, HI-HI, LO-LO				HI-HI, LO-LO
Auto-zero time		0.1 to 999.9 s (in Tachometer Mode)				
Startup time		0.0 to 99.9 s				
Averaging		Simple averaging/moving averaging selectable, Number of times: OFF, 2, 4, 8 or 16 times				
Prescaling function		0.001 to 99.999 (in Tachometer Mode)				
Decimal point adjustment		Rightmost 3 digits				---
Sensor waiting time		290 ms max. (Control output is turned OFF and no input is accepted during sensor waiting time.)				
Input	Input method	No-voltage Input Impedance when ON: 1 kΩ max. (Leakage current: 12 mA when 0 Ω) ON residual voltage: 3 V max. Impedance when OFF: 100 kΩ min. Voltage Input High (logic) level: 4.5 to 30 VDC Low (logic) level: 0 to 2 VDC (Input resistance: approx. 4.7 kΩ)				
	Hold input	Minimum input signal width: 20 ms				---
External power supply		12 VDC (±10%), 100 mA * Refer to *Safety Precautions (Common)* on page 61 for details.				
Control output		Contact output: 3 A at 250 VAC/30 VDC, resistive load (cosϕ=1) Minimum applied load:10 mA at 5 VDC (failure level: P, reference value)				
Display ✻2		7-segment, negative transmissive LCD Character height Present value: 10 mm (white), comparison value: 6 mm (green)				
Digits		6 digits (0 to 999999)				
Memory backup		Non-volatile memory (overwrites: 100,000 times min.) that can store data for 10 years min.				
Operating temperature range		–10 to 55°C (–10 to 50°C if Counter/Tachometers are mounted side by side) (with no icing or condensation)				
Storage temperature range		–25 to 70°C (with no icing or condensation)				
Operating humidity range		25% to 85%				
Case color		Black (N1.5)				

✻1. Do not use the output from an inverter as the power supply. The ripple must be 20% maximum for CC power.
✻2. The display is lit only when the power is ON. Nothing is displayed when power is OFF.

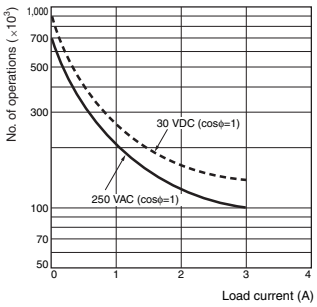
Characteristics

Insulation resistance		100 MΩ min. (at 500 VDC) between current-carrying terminal and exposed non-current-carrying metal parts, and between non-continuous contacts
Dielectric strength		2,000 VAC, 50/60 Hz for 1 min between current-carrying metal parts and non-current-carrying metal parts 2,000 VAC (for 100 to 240 VAC), 50/60 Hz for 1 min between power supply and input circuit (1,500 VAC for 24 VAC/12 to 48 VDC) 2,000 VAC 50/60 Hz for 1 min between control output, power supply, and input circuit 1,000 VAC, 50/60 Hz for 1 min between non-continuous contacts
Impulse withstand voltage		6.0 kV (between power terminals) for 100 to 240 VAC, 1.0 kV for 24 VAC/12 to 48 VDC 6.0 kV (between current-carrying terminal and exposed non-current-carrying metal parts) for 100 to 240 VAC, 1.5 kV for 24 VAC/12 to 48 VDC
Static immunity		Destruction: 15 kV, Malfunction: 8 kV
Vibration resistance	**Destruction**	10 to 55 Hz with 0.75-mm single amplitude, each in three directions for 2 hours
	Malfunction	10 to 55 Hz with 0.35-mm single amplitude, each in three directions for 10 min
Shock resistance	**Destruction**	300m/s^2 each in three directions, three cycles
	Malfunction	100m/s^2 each in three directions, three cycles
Life expectancy		Mechanical: 10,000,000 operations min. Electrical: 100,000 operations min. (3 A at 250 VAC, resistive load, ambient temperature condition: 23°C) ✻
Weight		Approx. 100 g (Tachometer only)

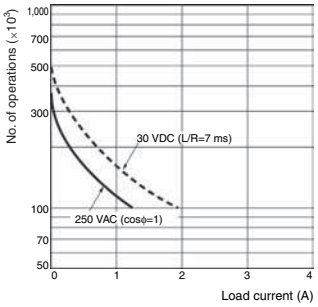
✻ See *Life-test Curve (Reference Values)* on the right.

Life-test Curve (Reference Values)

Resistive Load



Inductive Load



A current of 0.15 A max. can be switched at 125 VDC (cosϕ=1) (Life expectancy: 100,000 operations)
A current of 0.1 A max. can be switched if L/R=7 ms.
(Life expectancy: 100,000 operations)

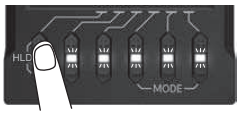
Operation Keys

7. Up Keys (UP1 to UP6)
(UP1, 2, 3, 4, 5, 6 from right to left)

8. Down Keys (DW1 to DW6)
(DW1, 2, 3, 4, 5, 6 from right to left)

9. Hold Operation (UP6+DW6)

1. Press HLD keys (UP6+DW6) simultaneously for at least one second.
2. LED on each key starts blinking.
   Do not release the keys until the LED starts blinking. Otherwise the setting value may change. If not blink, that is because the keys are not pressed simultaneously. In this case, release the keys after pressing for at least 1 second, and restart from 1.
3. Press and hold until the LED turns off. If you release the keys while blinking, the hold operation will be interrupted.



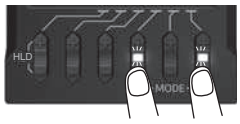
10. Mode Operation (UP1+UP3 or DW1+DW3)

<Change of setting item>

1. Press MODE keys (UP1+UP3 or DW1+DW3) simultaneously to switch setting items.

<Move to Function Setting Mode>

1. Press MODE key (UP1+UP3 or DW1+DW3) for at least 2 seconds simultaneously.
2. LEDs on UP1 (DW1) and UP3 (DW3) key start blinking.
   Do not release the keys until the LEDs start blinking. Otherwise the setting value may change. If not blink, that is because the keys are not pressed simultaneously. In this case, release the keys after pressing for at least one second, and restart from 1.
3. Press and hold until the LED turns off. If you release the keys during blinking, the mode will not be moved to Function Setting Mode.



DW1+DW3

11. Status indicator

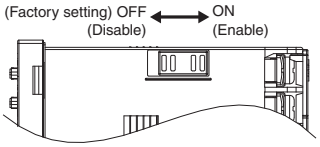
<When Run mode is not selected.>
· When the indicator display mode is ON
If "Upper and lower limit" or "Area" is selected in the tachometer output mode, the ratio of the measurement value to the comparison value is displayed from 0 to 100%.
· When the indicator display mode is all off or all lit
All off or all lit display.

Note. When you press the Up Key or the Down Key, the indicator display or all-lit display goes off, and the pressed key lights up or blinks.

<When Function Setting Mode is not selected>
· The keys that can be set light up for notification.

Switches

12. Key-protect Switch



Dimensions

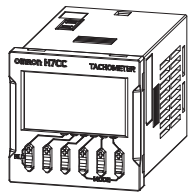
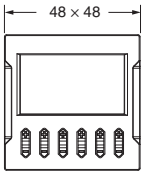
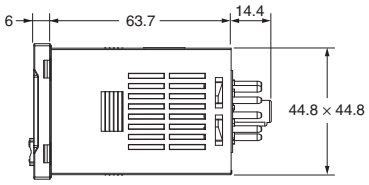
Tachometers

Dimensions without Flush Mounting Adapter

H7CC-R□

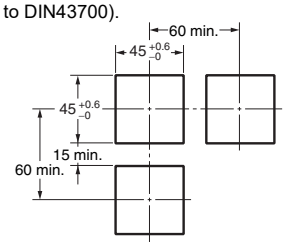




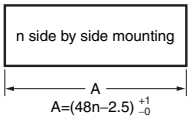


Panel Cutouts

Panel cutouts are as shown below (according to DIN43700).



Note: **1.** The mounting panel thickness should be 1 to 5 mm.
2. To allow easier operation, it is recommended that Adapters be mounted so that the gap between sides with hooks is at least 15 mm (i.e., with the panel cutouts separated by at least 60 mm).
3. It is possible to horizontally mount Timers side by side. Attach the Flush Mounting Adapters so that the surfaces without hooks are on the sides of the Timers. If Counters/ Tachometers are mounted side by side, however, water resistance will be lost.



With Y92A-48F1 attached.
